Volume I

CONTENTS

Synopsis .......................................... i-ix
Certificate ........................................... x
Acknowledgements ................................. xi-xii

CHAPTER 1 INTRODUCTION ............................. 1-5

CHAPTER 2 BEHAVIOUR OF PLANE AND SKIRTED STRIP FOOTINGS ON SAND .......... 6-95

  2.0 Introduction .................................... 6
  2.1 Bearing capacity considerations of shallow foundations .......... 9
    2.1.1 Modes of Failure ............................... 9
    2.1.2 Terminology ..................................... 11
    2.1.3 Vertical stress distribution ...................... 13
    2.1.4 Contact pressure distribution .................... 14
  2.2 Theory of bearing capacity .......................... 23
    2.2.1 Axial Loads ..................................... 23
      2.2.1.1 Bearing capacity calculations
            by theory of elasticity ...................... 23
      2.2.1.2 Bearing capacity by means
            of classical earth pressure theory .......... 23
      2.2.1.3 Bearing capacity by theory of plasticity ...... 24
      2.2.1.4 Bearing capacity based
            on experimental failure surface ............ 46
      2.2.1.5 Bearing capacity based on finite element method .. 49
    2.2.2 Horizontal loads ............................... 54
    2.2.3 Footings subjected to eccentric and oblique loads ........... 55
  2.3 Theory of bearing capacity of skirted strip footings .............. 64
    2.3.1 General .......................................... 64
  2.4 Experimental set ups and results .................................. 70
## CONTENTS

### CHAPTER 3 SCOPE, PROGRAMME AND SCHEME OF INVESTIGATION  96-107

3.1 Scope................................................................................... 97

3.1.1 Theoretical work ................................................... 97

3.1.2 Experimental work ................................................. 98

3.2 Programme ................................................................. 98

3.2.1 Objectives................................................................. 98

3.2.2 Experimental schedule ......................................... 99

3.2.2.1 Nomenclatures...................................................... 99

3.3 Schemes ......................................................................... 100

3.3.1 Parameters used ........................................................ 100

3.3.2 Plots ............................................................................. 101

### CHAPTER 4 THEORETICAL DEVELOPMENTS .............. 108-253

4.1 Scope................................................................................... 108

4.2 Observations on Terzaghi's classical theory of bearing capacity 109

4.3 Modified theory of bearing capacity of plane footings on sand. 110

4.3.1 General ................................................................. 110

4.3.2 Summary of theoretical work for plane footings .............. 116

4.3.3 Derivation of modified bearing capacity factors .............. 119

4.4 Theory of bearing capacity for Skirted strip footings .... 126

4.4.1 General ................................................................. 126

4.4.2 Mechanism under skirted footings ......................... 126

4.4.3 Effect of roughness of the footing ........................... 128

4.4.4 Increase in density ..................................................... 128

4.4.5 Derivation of bearing capacity factors for axial loads .. 132

4.4.6 Terzaghi modified and classical equations for bearing capacity factors (plane strip footings) from the derivation of equations of present investigations (skirted strip footings) ................................ 155
CONTENTS

4.5 Eccentrically, Obliquely Loaded Skirted Footings on Sand

4.5.1 Derivation of bearing capacity factors for eccentrically, obliquely loaded skirted strip footing

4.5.2 Wedge angles relationship

4.6 Horizontal load

4.7 Verification of Variation in modulus of elasticity by FEM using ANSYS software

CHAPTER 5 MEASURING FACTORS AND EXPERIMENTAL SET UP

5.1 Factors affecting measurements

5.1.1 Density of sand bed

5.1.3 Experimental set up

5.1.3.1 Experimental tank

5.1.3.2 Loading frame

5.1.4 Measurement system

5.2 Description of the Set-up

CHAPTER 6 PRESENTATION, ANALYSIS AND DISCUSSION

6.1 Presentation of results

6.2 Determination of parameters

6.3 Analysis and discussion

6.3.1 Axial load

6.3.1.1 Load-Settlement

6.3.1.2 Vertical stress distribution

6.3.1.3 Contact Pressure distribution

6.3.2 Eccentric vertical load

6.3.2.1 Load-Settlement

6.3.2.2 Vertical stress distribution and contours

6.3.2.3 Contact pressure
CONTENTS

6.3.3 oblique load ................................................................. 408
  6.3.3.1 Load - settlement .................................................. 408
  6.3.3.2 Vertical stress distribution .................................... 434
  6.3.3.3 Contact Pressure: (Oblique loads) ....................... 439

6.3.4 Horizontal load ........................................................... 454
  6.3.4.1 Load - Displacement ............................................. 454

CHAPTER 7 SUMMARY OF FINDINGS ............................................ 465-484
  7.1 Theoretical expositions .................................................. 466
  7.2 Expositions from measurement factors and set ups ............ 468
  7.3 Findings based on experiments ........................................ 471

REFERENCES ................................................................. 485-493

AUTHORS VITAE ................................................................. 494-495
Volume II

CONTENTS

Synopsis ................................................................. i-ix

CHAPTER 1 COMPUTER PROGRAMMES .......................... 1-14

CHAPTER 2 SPECIFICATIONS FOR THE MEASURING
EQUIPMENT AND MATERIALS ............................... 15-25

CHAPTER 3 EXPERIMENTAL DATA AND BASIC PLOTS ....... 26-361

CHAPTER 4 SUMMARY OF FINDINGS ............................ 362-381
