ACKNOWLEDGEMENTS

Although my name is on its spine, this thesis has only been made possible through the efforts of others to whom I owe debts of gratitude that cannot be repaid in a few modest paragraphs. My first thanks must go to Dr. R. Balaraman, my research supervisor, for his support, encouragement, and advice during every stage of my research, since July 2007. I have always benefited from his useful comments, suggestions and constructive discussions. I thank him for devoting enormous efforts and time to help me in correcting all manuscripts I wrote. His excellent skill in English language made the concepts of my thesis clearer.

I am grateful to Dr. M. R. Yadav, Head, Pharmacy Department and Dr. S. J. Rajput, Coordinator, G. H. Patel Pharmacy Department, The Maharaja Sayajirao University of Baroda, Vadodara, for providing necessary facilities for this work.

The research upon which this thesis is based was made possible through financial support from All India Council for Technical Education (AICTE). I am grateful to the AICTE for awarding the National Doctoral Fellowship (NDF) for the research.

I would like to thank K. Patel, Phytoextract Ltd., Mumbai for providing green tea extract as gift sample, Genesis Lab Ltd., Mumbai for gifting Lycopene sample and Cherain Chemicals, Baroda for supplying pomegranate fruit extract.

I would also like to thank Dr. Datta Maddamwar, Professor and Head, Microbiology Department, S. P. University, Vidyanagar, Anand for permitting me to carry out gel electrophoresis and Mr. Varun Shah, Research Scholar for his help in doing gel electrophoresis.

I wish to thank Dr. Deven Desai, MD, Pathology, Narhari Hospital Baroda for his help in histopathological study and Mr. Vikas Toke, Jyot Pathology, Baroda for carrying out histopathological work.
I deeply acknowledge my warmest thanks for the assistance rendered by my friends Vaibhav, Rupa, Vinot, Chintan, Hardik and every other person who has directly or indirectly been responsible in extending help to successfully complete the research work.

The support, patience and encouragement rendered by my family members have enabled me to overcome the obstacles in the path of progress. I have no words to express gratitude to my parents for their unstinted care and love. I am indeed grateful to my life companion, Shital and daughter Antara for their encouragement, confidence and forbearance.

Mere words cannot express my gratitude to the souls of those rats whose lives were sacrificed for this piece of work.

Above all, I offer my heartfelt and sincere prayers to Almighty who gave me a role of researcher in life and for being so merciful!

Aman B. Upaganlawar
