ACKNOWLEDGEMENTS

It is with great pleasure to express here my gratitude and thanks for all those who have helped me during the course of the present work.

First and foremost, with a sad and heavy heart for which words fail to express, I am forever, greatly indebted to my Supervisor, Late Professor Mahendra Kumar Khare who suddenly passed away on the 14th February, 1989. I am thankful to him for suggesting the problem and help in the preparation of the manuscript. It was through his guidance and especially his encouragement that enabled me to carry out the work with Transmission Electron Microscopy and who patiently taught me the techniques in experimental embryology. For this specialised training, I shall ever remain grateful to him. This thesis is dedicated to his memory, thereby rendering tribute to a teacher who was not only a scientist, but also a scholar whose untimely demise is a great loss to all of us.

I am most profoundly indebted to Professor K. Chatterjee, Head of the Department of Zoology, for his readiness to shoulder the responsibilities, and providing me with all the laboratory facilities related to my present work. I owe deep and abiding gratitude for his kind patronage, understanding and valuable help.
My grateful thanks are due to Professor R. G. Michael and Dr. (Mrs.) P. Michael for their kind suggestions and advice, and also their keen interest and help in many ways.

I offer my special thanks to Professor R. Bellairs, Department of Anatomy and Embryology, London, who visited our department and stayed in Shillong, for the valuable suggestions and encouragement to carry out with this present work and her kind thoughtfulness and readiness to lend a helping hand even from across the ocean.

I thank Professor A. R. Varman for always allowing me to use the laboratory facilities.

I take this opportunity to express my gratitude to Dr. D. T. Khating, Head of RSIC for providing me with laboratory facilities to carry out with the work on Transmission Electron Microscopy.

I wish to extend my gratitude to Mrs. B. Dkhar, Mr. S. Chankija and Mr. P. Joseph of the RSIC for their invariable assistance in carrying out the work.

I sincerely thank the Manager, Poultry farm, Kyrdem Kulai and Mr. K. Phanwar for arranging the hatchable hen’s eggs available to me regularly throughout the course of this investigation.
I wish to record my deep appreciation to Mr. R. W. Dympep for the labourious typing of this thesis; to Mr. B. K. Das who provided me with valuable assistance in photography and to Mr. S. Roy Choudhury for his technical assistance and co-operation; to them I am much indebted in the completion of this thesis.

I thank Ms. B. Lanong, B. Rynjah, L. Makri, D. Shadap, P. Chaurasia, Mr. C. Kharkhuli, Mr. D. Paul, Mr. P. G. Nongkynrih, Dr. V. T. Darlong who provided me with valuable assistance throughout my research work.

I cannot express how thankful I am to my colleagues in the laboratory, D. Wanswett, A. Gupta, Dr. S. Choudhury, M. Roy, R. Devi for their help, understanding and humour, which relieved me from the monotony of the repetitive and daily routine procedures of my research work.

To my auntie, Miss R. Hooroo, my uncle, A. Wahlang and my dear sisters and brothers Mugabani, Ibansara, Mardondor, Idaiaisuklang and Donkupar, Iasaid and Arnold for their unfailing co-operation which has made it possible to complete my thesis.

My affectionate love and thanks go to my dearest mother, Dr. (Mrs.) R. Hooroo. Her unfailing love, understanding, encouragement, support, helping hand and the greatest gift - the desire to see that my work is
complete. The loving memory of my dearest father, Late N. Hooroo who left for his heavenly abode, has been an inspiration to me throughout.

Last but not the least to my husband T. R. Kynta and my children Kerdaliing, Tobalynti, Toridabtin, whose affectionate love, understanding, co-operation and patience, supported me until my work is finished.

Dated Shillong,
