

LIST OF TABLES

Table	Title
Table 2.1	Chitin content in various sources
Table 4.1.1	Number of lesions, volume of gastric juice, and acid output and pepsin activity of the gastric mucosa of normal and experimental groups of rats
Table 4.1.2	Activities of membrane bound ATPases of the gastric mucosa of normal and experimental groups of rats
Table 4.1.3	Levels of reduced glutathione and lipid peroxides in the gastric mucosa of normal and experimental groups of rats
Table 4.1.4	Activities of antioxidant enzymes in the gastric mucosa of normal and experimental groups of rats
Table 4.1.5	Mineral status of the stomach of normal and experimental groups of rats
Table 4.1.6	Levels of various amino acids in the stomach of normal and experimental groups of rats
Table 4.2.1	Levels of diagnostic marker enzymes in the serum of normal and experimental groups of rats
Table 4.2.2	Levels of urea, albumin, globulin, albumin/globulin ratio in the serum of normal and experimental groups of rats
Table 4.2.3	Levels of creatinine and glucose in the serum of normal and experimental
Table 4.2.4	Levels of glycoconjugates in the liver of normal and experimental groups of rats
Table 4.2.5	Levels of lipid peroxides in the serum and liver of normal and experimental groups of rats
Table-4.2.6	Levels of antioxidant enzymes in the liver of normal and experimental groups of rats
Table 4.2.7	Activities of membrane bound ATPases in the liver of normal and experimental groups of rats
Table 4.2.8	Levels of total thiols and free thiol in the liver of normal and experimental groups of rats
Table 4.2.9	Levels of lipid components in the serum or normal and experimental groups of rats
Table 4.2.10	Levels of lipid components in the liver normal and experimental groups of rats
Table 4.2.11	Fatty acid composition of the liver of normal and experimental groups of rats
Table 4.2.12	Levels of calcium, magnesium and zinc in the liver of normal and experimental groups of rats

LIST OF FIGURES

Figure	Title
Fig.2.1.	Structure of chitosan
Fig.2.1.	Structure of β -D-Glucosamine
Fig.2.3.	Structure of stomach
Fig.2.4.	<i>Helicobacter pylori</i>
Fig.2.5.	Structure of ibuprofen
Fig.2.6.	Fig. 2.6. The Cyclooxygenase Pathway
Fig.2.7.	Structure of isoniazid
Fig.2.8.	Metabolic pathway of Isoniazid
Fig.2.9.	Structure of rifampicin
Fig.4.1.1.	Levels of mucosal protein in experimental and normal rats.
Fig.4.1.2.	Levels of hexose and hexosamine in the stomach tissue of control and treated animals.
Fig.4.1.3.	Sialic acid levels in the stomach of normal and experimental groups of rats.
Fig.4.1.4.	Levels of sodium and potassium in the stomach of normal and experimental groups of rats.
Fig.4.2.1.	Levels of ALT and AST in the liver of normal and experimental groups of rats.
Fig.4.2.2.	Levels of protein in the serum of normal and experimental groups of rats.
Fig.4.2.3.	Protein levels in the liver of normal and experimental rats.
Fig.4.2.4.	Levels of HDL-cholesterol and LDL-cholesterol in the serum of normal and experimental groups of rats.
Fig.4.2.5.	Levels of sodium and potassium in the liver of normal and experimental groups of rats.

LIST OF PLATES

Plate	Title
Plate 4.1.1	Gross pathology of normal stomach in control rat
Plate 4.1.2	Gross pathology of ulcerated stomach of rat
Plate 4.1.3.	Gross pathology of chitosan pre-treated stomach
Plate 4.1.4.	Gross pathological view of glucosamine pre-treated stomach.
Plate 4.1.5.	Histopathological architecture of the stomach tissue of normal rat
Plate 4.1.6.	The architecture of stomach tissue of chitosan control rat
Plate 4.1.7.	The normal stomach architecture of glucosamine administered rat
Plate 4.1.8.	Ibuprofen induced ulcerated stomach tissue
Plate 4.1.9.	Near normal architecture of stomach in chitosan pre treated animal
Plate 4.1.10.	Architecture of stomach tissue of glucosamine treated rats.
Plate 4.1.11.	The SDS-polyacrylamide gel electrophoretic pattern of stomach proteins
Plate 4.2.1.	Histopathological view of normal liver tissue of normal and experimental groups of rat
Plate 4.2.2.	The histopathological view of the liver tissue of chitosan control animal
Plate 4.2.3.	The histopathological architecture of the liver tissue of glucosamine alone fed rat
Plate 4.2.4.	The histopathology of the liver tissue of antitubercular drugs-administered rats.
Plate 4.2.5.	Histopathology of liver tissue of Chitosan co-administered rats
Plate 4.2.6.	Architecture of the liver tissue of glucosamine co-administered rat
Plate 4.2.7.	SDS-page electrophoretic pattern of serum protein
Plate 4.2.8.	Electrophoretic pattern of liver protein in normal and experimental groups of rat

ABBREVIATIONS

ANSA	- 1-amino-2-naphthol-4-sulphonic acid
AR	- Analar
ATP	- Adenosine triphosphate
BSA	- Bovine serum albumin
°C	- Degree celsius
CAT	- Catalase
CDNB	- 1-chloro-2,4-dinitro benzene
dl	- Decilitre
DNPH	- 2-4-dinitrophenyl hydrazine
DTNB	- 5,5-dithio-bis-(2-nitro benzoic acid)
EDTA	- Ethylene diamine tetra acetic acid
Fig.	- Figure
FFA	- Free fatty acid
g	- grams
GPx	- Glutathione peroxidase
GSH	- Glutathione
HCl	- Hydrochloric acid
H ₂ O ₂	- Hydrogen peroxide
H ₂ SO ₄	- Sulphuric acid
h	- Hour
HDL	- High density lipoprotein
i.p.	- Intra peritoneal
Kg	- Kilogram
KOH	- Potassium hydroxide
KI	- Potassium iodide.
LDH	- Lactate dehydrogenase.
LDL	- Low density lipoprotein
M	- Molar
mM	- Millimolar.

mg	- Milligram
Mm	- Millil-molar.
mm	- Millimeter
N	- Normal
μ moles	- Micro molesmin
Min	- Minute
ml	- Militer
NADH	- Reduced nicotinamide adenine dicutedldiacid
NADP	- Nictonamine
Pi	- Inorganic phohpshris.
OD	- Optical denstiry
SD	- Standard division
SOD	- Superoxide dismutase
TBA	- Thio barbituric acid.
v/v	- Volume/volume
VLDL	- Very low density lipoprotein
w/v	- Weight/volume
w/w	- Weight/weight
