ACKNOWLEDGEMENT

Although I am indeed the sole author of this thesis, I am by no means the sole contributor! So many people have contributed to my thesis, to my education, and to my life, and it is now my great pleasure to take this opportunity to thank them.

First and foremost, I want to thank my thesis adviser and guide, Dr. Prafulla Jha, for making it possible for me to realize my hopes and dreams. You have provided just the right amount of guidance to ensure that my efforts contribute to the mainstream of physics research. I am also deeply grateful for your steadfast encouragement and generous financial support during early years of my endeavor. This thesis would not have been possible without your kind support, the trenchant critiques, the probing questions, and the remarkable patience. Your capacity to combine critique with an immediate empathy and commitment towards students and others engaged in struggle will always inspire me. Amid the laughter and chapter drafts, you were always there to offer quiet encouragement.

I would also like to thank Head of Department, Prof. C.F. Desai, for providing all basic facilities of department and all the rest of the academic and support staff as well as research scholars of Department of Physics, particularly those who have put up with my drifting a long way away from my original title.

And everyone else, who kept asking me all these years: "When are you finishing your thesis?" Silencing that question was also one of the prime motivations when life's other intellectual enticements kept singing to me.

Several teachers have influenced me profoundly at pivotal moments in my early education. I wish to thank them all for teaching me the essence of any subject is notions – not notations! In retrospect, you introduced me to "work smarter and harder that makes things simple!"

I am thankful to Prof. Sankar P. Sanyal, BU, Bhopal, Dr. Shyamala Bhardwaj, BARC, Mumbai, Dr. Akhilesh K. Arora, IGCAR, Kalpakkam, and Dr. Arun Pratap, Department of Applied Physics, MSU, Vadodara for their steady encouragement through out a five-year odyssey.

I was privileged to share many minor but important matters with my officemates - Satyam, Ankur and Sanjeev who provided steady encouragement during the write-up stage.

Also special thanks to Balkrishna Dawari, IISc, Bangalore for the book on “You Can Heal Your Life” by Louise Hay and so many discussions on how to relax even though working harder. You provided decisive and energetic support during the write-up stage and helped me clearing the path towards thesis completion in your solution-oriented way. You also showed me how generosity flows so naturally from a sense of being blessed. Your belief that a better way can always be found has influenced my approach to this research, as well as to daily life.
I can not complete this easiest but most difficult part of thesis without thanking Mrs. Sunita Jha. Your generous nature and home-spun hospitality are deeply appreciated!

I also thank Deepali-Piyush Parekh, Jonita-Vatsal, Rupal Shah, Heena Thakkar, Sapna Gehi and Chirag Shah who enriched my life through their long-standing friendships.

Although too numerous to name, they are appreciated for their individual contributions. Thanks are due also to several researchers and staff at other organizations that I visited in the initial stages of the study. This thesis gradually emerged amid the friendships provided their most lasting lessons.

Now that I have recounted the bits of my upbringing in physics, I have the pleasure of acknowledging those who have provided me with the personal foundation, which has been so indispensable to my professional life. First and foremost, I thank my mother, Smt. Surekha Talati and my father, Shri Kanubhai Talati for providing the bedrock of support on which my career is built and the fortress of never-ending concern which has enabled me to weather all the storms of my student life. Your patience and understanding with the relentless demands of doctoral study will surely earn you a place among the Saints of the Ages! I offer my love and thanks in perpetuity to my mother, whose foresight and values paved the way for a privileged education, and to my father who gently offered counsel and unconditional support at each turn of the road.

Thanks are also due to all my relatives, who put up with my absence in special occasions during these years of my doctoral studies!

I especially thank my younger sister, Shefali for her committed support overlooking my faults and for her valuable constructive criticisms. You forced me to think on my feet -- it's been both enlightening and entertaining! Thank you for being with me in all ups and downs!

It is customary to mention here that the author alone assumes responsibility for the conclusions of this thesis and any errors it may contain. The author also acknowledges the Council of Scientific and Industrial Research (CSIR), University Grants Commission (UGC), and Department of Science and Technology (DST), New Delhi for financial support.

At last, I thank you all for launching me on the journey of a lifetime -- like Robert Frost, I too have taken the road "less traveled by, and that has made all the difference."

(Ms. Mina K. Talati)
