ACKNOWLEDGEMENTS

I would like to place on record my deep sense of gratitude and sincere thanks to Professor (Dr.) S.D. Sabnis under whose able guidance I have undertaken this research study. He initiated me to the subject, provided valuable guidance at various stages of my work, led me to the sources of valuable material and discussed the results of my research data, findings and the conclusions. Amidst his multifarious academic and research activities, he never denied me encroachment on his valuable time whenever I went to him. But for his valuable guidance, inspiration and encouragement, it would not have been possible for me to complete this work in such a short span of time.

I am to thank Dr. M. Daniel who not only motivated me during the initial stages to take up this study but also helped and guided me at all stages of my work since beginning, amidst his busy academic and research schedule in the department.

During the course of my research I had had several occasions to discuss my problems with Dr. S.N. Padate. He discussed problems with me patiently and offered solutions to them. I am thankful to him also.

My thanks are also due to Dr. A.R. Mehta, Head, Botany Department, who very kindly provided me laboratory
facilities which enabled me to complete this work.

I received valuable help in obtaining botanical plants required for the study from Mr. S.D. Vaidya of the Bhabha Atomic Research Centre, Bombay; Mr. S.K. Mehta, Chief Commercial Manager, Polymers Corporation of Gujarat, Baroda and Mr. Jhaverilal Puranmal Varma, Proprietor, The Roses Garden and Nursery, Nandesari, Baroda. Dr. (Mrs.) Patricia Holmgren of the New York Botanical Garden, New York provided some plants from New York. I thank all of them for their valuable help in obtaining the research material.

Dr. Dietor Wassahansan, Chairman, Botany, Smithsonian Institute, Washington, provided useful library material pertinent to my research project and I am thankful to him.

Mr. Somabhai Solanki, an experienced gardner of several years standing in Baroda, took considerable pains in maintaining a small corner in the garden of my residence where I had nurtured a number of plants which formed part of my research. My thanks are due to him.

I would be failing in my duty if I do not make a mention of valuable co-operation and advice that I received from my colleagues in the Department - Mr. C.B.S. Dutt, Mr. P.M. Padhye and Mr. N. Augustine and Miss Nilima Kulkarni who rendered me valuable help in and outside the laboratory which considerably helped me in doing the final shape to this thesis.
Mr. Amit Merh and Mr. M.M. Mistry assisted me considerably in drawing various charts included in this dissertation. I am sincerely grateful to both of them.

I am specially grateful to Mr. P.S. Bhoite who very neatly executed the typing work within a record time and gave the thesis the present shape.

Lastly, I am to thank all the other teaching and non-teaching staff members of the Botany Department for their willing co-operation and help rendered to me in course of my studies at the department.

Padmaja Merh
