ACKNOWLEDGEMENT

First of all, I give the glory and honour to Almighty God for the strength He gave me throughout and till completion of my research work.

I would like to express my heartfelt gratitude to my supervisor, Prof. L. K. Jha for his guidance and unflinching help. It has to be stated that if it were not for him, this thesis would never have seen the light of the day.

I am thankful to Prof. B. K. Tiwari, Head, Department of Environmental Studies, North Eastern Hill University, Shillong, for providing necessary laboratories facilities. My thanks are also due to Prof. O. P. Singh, Dr. D. Walia, Dr. D. Paul and Dr. S. S. Chaturvedi for their priceless words of advices and constant encouragement. I also thank all the non-teaching staff of the Department for their help and support during my work.

Special thanks to Dr. H. Tynsong, Deputy Director (S), Ministry of Environment and Forest, Regional Office Shillong, for helping me in identification of plant species. His constant inspiration, support and prayers are gratefully acknowledged.

I would also like to thank all my lab mates, colleagues and friends in the Department who had lent their helping hand whenever needed.

Last but not the least; I would like to express my gratitude to my parents, brother and sisters for their help, general support and faith in my abilities.

Taking this opportunity, I would like to apologize to the readers for the unintended shortcomings, if any, in the study. Nonetheless, I expect that this thesis would throw some light on the readers with regards to watershed management that would help in maintaining health of the environment and people, also in alleviating poverty in the society.
