CONTENTS

1 INTRODUCTION 1

2 CHAPTER 1 NUMBER-THEORETIC AND COMBINATORIAL ALGORITHMS 12
  1.1 Addition of 2 multi-precision non-negative integers 14
  1.2 Subtraction of 1 multi-precision non-negative integer from another multi-precision non-negative integer 16
  1.3 Multiplication of 2 multi-precision integers 18
  1.4 Division of a multi-precision non-negative integer by a multi-precision positive integer 20
  1.5 The square root 25
  1.6 Prime numbers 29
  1.7 Generalisation of the control structure for a variable number of nested loops 33

3 CHAPTER 2 POLYNOMIAL EQUATIONS 45
  2.1 Reconstruction of a polynomial from its zeros 46
  2.2 The integer zeros of a monic polynomial over Z 49
  2.3 H.C.F. of polynomials over Z 53
  2.4 Algorithm for calculating the quadratic factors of a monic polynomial over Z 55
  2.5 Algorithm for reducing a non-monic polynomial with integer coefficients to a monic polynomial with integer coefficients (with the objective of calculating its zeros) 60
  2.6 Polynomial with rational coefficients 63
  2.7 Polynomial with Gaussian coefficients 63

4 CHAPTER 3 EIGENVALUES AND EIGENVECTORS OF A MATRIX 64
  3.1 Characteristic Polynomial 65
  3.2 Eigenvalues and eigenvectors 72
  3.3 Jordan canonical form 72

5 CHAPTER 4 CONSTRUCTION OF TEST MATRICES 79
  4.1 Matrices with given determinants 81
  4.2 Integer matrices with pre-assigned integer spectra 83
  4.3 The modal matrix 85
  4.4 Integer matrices with complex and surd eigenvalues 89
  4.5 Integer matrices with generalised eigenvalues 90
  4.6 Hessenberg matrix 91
  4.7 The positive matrix 92
  4.8 Symmetric matrices 99
  4.9 The positive symmetric matrix 103
  4.10 Hermitian, skew-symmetric, skew-Hermitian 105
