List of Tables

Chapter I
Table 1.1  Comparison between the number of species in India and the world. 5
Table 1.2  Endemic fauna of Western Ghats, India. 13
Table 1.3  Globally threatened animals occurring in India by status category. 14

Chapter II
Table 2.1  Vertebrate diversity of the Western Ghats 27

Chapter III
Table 3.1  Observed and estimated family richness for 34 streams of Western Ghats 55
Table 3.2  Observed and estimated generic richness for 34 streams of Western Ghats 56
Table 3.3  Observed and estimated order richness across latitudinal zones 57
Table 3.4  Observed and estimated family richness across latitudinal zones 57
Table 3.5  Observed and estimated generic richness across latitudinal zones 57
Table 3.6  Observed and estimated order richness across altitudinal zones 58
Table 3.7  Observed and estimated family richness across altitudinal zones 58
Table 3.8  Observed and estimated generic richness across altitudinal zones 58
Table 3.9  Diversity measures for 34 streams of Western Ghats 60
Table 3.10  Alpha diversity indices for families across latitudinal zones 61
Table 3.11  Alpha diversity indices for genera across latitudinal zones 62
Table 3.12  Similarity matrix of Jaccard’s index for families across latitudinal zones 62
Table 3.13  Similarity matrix of the Jaccard’s index for genera across latitudinal zones 63
Table 3.14  Alpha diversity indices for families across altitudinal zones 65
Table 3.15  Alpha diversity indices for genera across altitudinal zones 65
Table 3.16  Similarity matrix of the Jaccard’s index for families across altitudinal zones 66
Table 3.17  Similarity matrix of the Jaccard’s index for genera across altitudinal zones 67
Table 3.18  Comparative data of the number of families and genera of Ephemeroptera and Odonata in Tropic of Cancer of Eastern and Western Hemisphere 79
Table 3.19  Ordination diagram of substrates of streams with family level richness Correlation matrix 69
Table 3.20  Eigenvalues 70
Table 3.21  Ordination diagram of substrate of streams with generic richness Correlation matrix 71
Table 3.22  Eigenvalues  71  
Table 3.23  Ordination diagram of physico-chemical parameters with family level richness Correlation matrix  72  
Table 3.24  Eigenvalues  73  
Table 3.25  Ordination diagram of physico chemical parameters with generic richness Correlation matrix  74  
Table 3.26  Eigenvalues  75  

Chapter IV  
Table 4.1  Landscape element types of Western Ghats  92  
Table 4.2  The landscape element types of 34 investigated stream sites  93  
Table 4.3  Percentage of trophic categorization of macroinvertebrates in 34 streams of Western Ghats  95  
Table 4.4  Summary of a nested analysis of variance test to examine the influence of stream orders and LsE on total functional feeding group  96  
Table 4.5  Proportional abundance of functional feeding groups across stream orders  97  
Table 4.6  Proportional abundance of functional feeding groups across LsE  100  
Table 4.7  Gut content analysis of selected fish from investigated sites of Western Ghats  100  

Chapter V  
Table 5.1  Physico-chemical analysis of water in different sites of Gadana river in August 2001 - July 2002.  110  
Table 5.2  Structural characteristics in Gadana river during August 2001-July 2002  110  
Table 5.3  Rainfall and air temperature in Gadana river during August 2001-July 2002  111  
Table 5.4  Taxonomic composition, number of individuals, and species diversity of macroinvertebrates from Gadana river August 2001-July 2002  112  
Table 5.5  Diversity index value of macroinvertebrates at different sites of Gadana River  117  
Table 5.6  Coefficient of similarity  117  
Table 5.7  Monthly variations in macroinvertebrates density (no/m³) in the selected sites of Gadana river  118  
Table 5.8  Analysis of variance (ANOVA) of macroinvertebrates in Gadana river  120
Chapter VI

Table 6.1  Habitat parameters and values are used in the assessment of 34 stream sites. Values are adjusted to weigh the importance of individual habitat parameters. The overall habitat assessment is based on the sum of the parameters (modified from Plafkin et al., 1989 and Sivaramakrishnan et al., 1996)

Table 6.2  Family Biotic Index, percentage EPT Index and richness of taxa in 34 streams of Western Ghats

Table 6.3  BMWP and BMWP- ASPT scores for 34 streams of Western Ghats

Table 6.4  Spearman’s rank correlations among biological approaches and habitat ranking for 34 stream sites of Western Ghats. Values of $r \geq 0.368$ represent significant ($p<0.05$) correlations, and are denoted by an asterisk

Table 6.5  Spearman’s rank correlations between biological and physical measurements for 34 stream sites of Western Ghats. Values of $r \geq 0.368$ represent significant ($p<0.05$) correlations, and are denoted by an asterisk

Table 6.6  Results of stepwise linear regressions examining biological measures on stratification variables, water quality and the habitat assessment score, based on the 34 sites of the Western Ghats. Individual p-values and correlation coefficients of the factors selected by the stepwise model are provided

Table 6.7  Results of stepwise multiple regression using the component measures of the RBP III score. P-values and multiple correlation coefficients for stratification variables, water quality variables and the habitat assessment score measured from the 34 sites in the Western Ghats
