Chapter 1

INTRODUCTION
1.1 Background of the problem
1.2 Scope of the present study
1.3 Aim of the present study
1.4 Objectives of the present study
1.5 Definition of concepts used in the present study
  1.5.1 Playschool
  1.5.2 Behavioural profile
  1.5.3 Creativity
  1.5.4 Problem solving ability
  1.5.5 Social cognition
  1.5.6 Preschoolers
  1.5.7 Socio-economic status
1.6 Hypotheses formulated for the present study
  1.6.a Primary hypotheses
  1.6.b Secondary hypotheses

Chapter 2

REVIEW OF RELATED LITERATURE
2.1 Play
  2.1.1 Definitions
  2.1.2 Values of play
  2.1.3 Gender and play
  2.1.4 Are today's children suffering from play deprivation?
  2.1.5 Need for play and playschools
  2.1.6 Playschools
  2.1.7 Evaluation of literature and position of the present study
2.2 Behavioural Profile or Temperament
  2.2.1 Definitions
  2.2.2 Dimensions/ Aspects of temperament
  2.2.3 The models of temperament
  2.2.4 Theories of temperament
    2.2.4.1 Psychoanalytic theory of Freud
    2.2.4.2 Buss and Plomin's theory (1975)
    2.2.4.3 Thomas and Chess’ theory (1977)
    2.2.4.4 Rothbart and Derryberrys’ theory (1982)
  2.2.5 Internal structure of temperament
2.4.7 Factors affecting problem solving
2.4.7.1 Cognitive factors
2.4.7.2 Age, sex and socio-economic status
2.4.7.3 Emotional factors
2.4.7.4 Creative thinking
2.4.8 Factors that interfere with effective problem solving
1. Lack of necessary experience / information
2. Functional fixedness: prior Vs present solutions
3. Mental set
4. Problem in selecting the right operators
2.4.9 How to foster problem solving abilities?
2.4.10 Problem solving abilities of preschoolers
2.4.11 Play and problem solving
2.4.12 Evaluation of literature and position of the present study
2.5 Social cognition
2.5.1 Definitions
2.5.2 Development of social cognition
2.5.3 The importance of social cognition
2.5.4 Social and non-social cognition
2.5.5 Models of social cognitive development
2.5.6 How social information is processed?
2.5.7 Basic aspects of social thought
2.5.7.1 The false consensus effect
2.5.7.2 Automatic vigilance
2.5.7.3 Motivated scepticism
2.5.7.4 Counterfactual thinking
2.5.8 Aspects of social cognition
2.5.8.1 Self-recognition
2.5.8.2 Conception of self
2.5.8.3 Conception of others
2.5.8.4 Social cognition as social inference
2.5.8.5 Role taking
2.5.9 Young child’s theory of mind
2.5.10 Social cognition of preschoolers
2.5.11 Factors influencing the development of social concept
2.5.12 Play and social cognition
2.5.13 Evaluation of literature and position of the present study
2.6 Preschoolers
2.6.1 Definitions
2.6.2 Importance of preschool years
2.6.3 Causes of the difference between children in different child care environments
2.6.3.1 Difference in the amount of attention and stimulation
2.6.3.2 Difference in the kind of attention and stimulation
Chapter 3

METHODS OF INVESTIGATION

3.1 Nature of study
3.2 Design of study
  3.2.1 The sample
  3.2.2 The tools
  3.2.3 Description of tools
    3.2.3.1 To assess behavioural profile
    3.2.3.2 To assess creativity
    3.2.3.2.i Test development
    3.2.3.2.a Verbal tests of creativity
    3.2.3.2.b Non-verbal tests of creativity
    3.2.3.3 Test to assess problem solving ability
    3.2.3.3.i Test development
    3.2.3.3.a Memory test
    3.2.3.3.b Test to measure the physical concept of
         the human body
    3.2.3.3.c Test to measure the concept of shape -
         Using shape sorter
    3.2.3.3.d Test using puzzle
    3.2.3.4. Test development for social cognition
      3.2.3.4.a Preliminary processing
      3.2.3.4.b Scoring pattern
      3.2.3.4.c Secondary processing
      3.2.3.4.d Reshaped test for social cognition
      3.2.3.5 General questionnaire
      3.2.3.6 Observation schedule for collecting
          information regarding playschools
  3.2.4 Pilot study
  3.2.5 Data collection procedure
  3.2.6 Statistical technique

Chapter 4

RESULTS

Chapter 5

DISCUSSION

Section 1: Comparative analysis of the data
5.1 Comparison of the socio-economic status

Section 2: Effect of playschool environment on study variables

5.2 Comparison based on the scores obtained for behavioural profile - nine dimensions and two categories for preschoolers in general, preschool boys and preschool girls who had attended and those who had not attended playschool

5.3 Comparison based on the scores obtained for creativity tests for preschoolers in general, preschool boys and preschool girls who had attended and those who had not attended playschool

5.4 Comparison based on the scores obtained for problem solving ability for preschoolers in general, preschool boys and preschool girls who had attended and those who had not attended playschool

5.5 Comparison based on the scores obtained for social cognition for preschoolers in general, preschool boys and preschool girls who had attended and those who had not attended playschool

5.6 Comparison of the influence of playschool environment on the study variables based on the 't' values obtained

Section 3: Effect of gender on study variables

5.7 Comparison of behavioural profile based on gender

5.8 Comparison of creativity based on gender

5.9 Comparison of problem solving ability based on gender

5.10 Comparison of social cognition based on gender

Section 4: Contribution of each aspect within the study variable with regard to the total score for each study variable

5.11 Pattern of influence of different aspects within each study variable on its total score

Section 5: Relationship between study variables

5.12 Interrelationship among the study variables

5.13 Interrelationship of the different aspects within each study variable

Section 6: Results obtained on descriptive analysis of the data

5.14 Findings of the present study

5.15 Other relevant findings

Chapter 6

SUMMARY AND CONCLUSIONS

6.1 The problem for investigation

6.2 Objectives

6.3 Hypotheses

6.4 Definition of concepts

6.4.1 Playschool

6.4.2 Behavioural profile

6.4.3 Creativity

6.4.4 Problem solving ability
