List of Tables

3.1 Calculated and Experimental $C_p$ of LHE-4 at SVP near $T_x$ ....... 71

3.2 Calculated values of $\alpha_p$, $\kappa_T$ and $\beta$ of LHE-4 at SVP near $T_x$ ....... 73

4.1 Different Parameters (equations 4.8 and 4.9) for sc, bcc, fcc and hcp arrangements ............... 91

4.2 $E(Q)$, $V_p$ and $V_g$ for sc arrangement ............... 92

4.3 $E(Q)$, $V_p$ and $V_g$ for bcc arrangement ............... 93

4.4 $E(Q)$, $V_p$ and $V_g$ for fcc arrangement ............... 94

4.5 $E(Q)$, $V_p$ and $V_g$ for hcp arrangement ............... 95

4.6 $E(Q)$ for sc arrangement for different $Q_{max}$ (in $\AA^{-1}$) ............... 96

4.7 $V_p$ and $V_g$ for sc arrangement for different $Q_{max}$ (in $\AA^{-1}$) ............... 97

4.8 $E(Q)$ for bcc arrangement for different $Q_{max}$ (in $\AA^{-1}$) ............... 98

4.9 $V_p$ and $V_g$ for bcc arrangement for different $Q_{max}$ in ($\AA^{-1}$) ............... 99

4.10 $E(Q)$ for fcc arrangement for different $Q_{max}$ (in $\AA^{-1}$) ............... 100

4.11 $V_p$ and $V_g$ for fcc arrangement for different $Q_{max}$ (in $\AA^{-1}$) ............... 101

4.12 $E(Q)$ for hcp arrangement for different $Q_{max}$ (in $\AA^{-1}$) ............... 102

4.13 $V_p$ and $V_g$ for hcp arrangement for different $Q_{max}$ (in $\AA^{-1}$) ............... 103

4.14 Different Parameters (Equations 4.11 and 4.12) for sc, bcc, fcc and hcp arrangements ............... 104

4.15 $E(Q)$, $V_p$ and $V_g$ for sc arrangement ............... 105
4.16 E(Q), V_p and V_g for bcc arrangement ................. 106
4.17 E(Q), V_p and V_g for fcc arrangement ................. 107
4.18 E(Q), V_p and V_g for hcp arrangement ................. 108

5.1 Energy Gap, Coherence length and Critical Velocity .... 133
5.2 Calculated Values of \( \rho_n \) and \( \rho_s \) using Energy Gap .... 134
5.3 Calculated Values of \( \rho_n \) and \( \rho_s \) from the Excited Number of Particles 135
5.4 Normal and Super-fluid Density Ratio .................... 136
5.5 Critical Angular Velocity and Other Quantities .......... 137
5.6 Critical Velocities in Helium Film ...................... 138

6.1 Ratio of the estimated effective mass to real mass of the helium atom at different pressures. Effective mass is obtained using the observed transition temperature in equation 6.3 ............ 157
6.2 Values of \( P_{ij} \) and corresponding numbers of atoms .... 158
6.3 Nearest neighbour distance for different atomic arrangements ... 160
6.4 Potential energy for sc arrangement ...................... 161
6.5 Potential energy on the surface for sc arrangement ........ 162
6.6 Excess surface energy for sc arrangement ............... 163
6.7 Potential energy for bcc arrangement .................... 164
6.8 Potential energy on the surface for bcc arrangement ........ 165
6.9 Excess surface energy for bcc arrangement ............... 166
6.10 Potential energy for fcc arrangement .................... 167
6.11 Potential energy on the surface for fcc arrangement ...... 168
6.12 Excess surface energy for fcc arrangement ............... 169
6.13 Potential energy for hcp arrangement .................... 170
6.14 Potential energy on the surface for hcp arrangement .... 171
6.15 Excess surface energy for hcp arrangement ................. 172

6.16 Comparison of our computed potential energies of helium-II (in units of K/atom) at T=0 with some other theoretical as well as experimental results. ................................. 173

6.17 Calculated values of the surface tension of helium-II at different temperatures. These values do not include the contribution of ripplon or thermal disturbance present in the system ................................. 174

6.18 Excess energy (in units of K/atom) at different atomic layers ................................. 175

6.19 Comparison of our calculated surface tension and surface thickness at T = 0 with some other theoretical calculation and experimental observations ................................. 177
