ACKNOWLEDGEMENTS

I take this opportunity to express my gratitude to Dr. J.R.B. Alfred, my mentor, for his optimism, creativity and needed support, more so, for his constant encouragement and direction throughout my work. Gratitude is expressed to Prof. R. George Michael, Head of the Department of Zoology not only, for his, making available the necessary facilities, but also for his keen interest and constructive criticism on the present work. I am indebted to Mrs. Prema Michael who donated the nylon rolls of different mesh sizes for use in litter bag studies.

To the University Grants Commission, New Delhi, thanks are expressed for initial programme funding (Project Code No. 040/Bio-Science, 1975) and to the North-Eastern Hill University for the award of a Research Fellowship.

Finally, to my wife, a feeling that cannot be expressed in words, for she understood that the present work was not a mere trifle nor a pastime of fools.

M. VIKRAM REDDY
