INTRODUCTION
1

REVIEW OF LITERATURE
2

2.1. Brief Review of work on Casuarina species
2.1.1 Growth performance of different Casuarina species
2.1.2. Biomass of Casaurina species
2.1.3. Physical properties of wood in Casuarina and other species
2.1.4. Effect of Casuarina species on physic-chemical parameters of soil
2.2. Phenology and floral biology of Casuarina species
2.2.1. Reproductive biology of Casuarina species
2.2.2. Reproductive biology of other species
2.3. Variability of fruit and seed parameters in Casuarina species
2.3.1. Cone or seed graded
2.4. Seed germination of Casuarina species
2.4.1. Influence of substrates for seeds germination of Casuarina
2.4.2. Effect of pre sowing treatments for seed germination in Casuarina species
2.4.3. Effect of pretreatments for seed germination in other species
2.5. Half sib progenies of Casuarina species
2.5.1. Nutrient content in progenies of Casuarina species
2.6. Variability, Heritability and Genetic advance
2.6.1. Variability in different Casuarina species
2.6.2. Variability of other species
2.7. Correlation studies
2.7.1. Correlation studies in Casuarina species
2.8. Path analysis
2.8.1. Path analysis of different Casuarina species
2.8.2. Correlation and path analysis of other species
2.9. D² analysis in Casuarina species
MATERIALS AND METHODS

3.1. General
3.1.1. Climate
3.1.2. Experimental material

3.2. Field observation on quantitative characters
3.2.1. Field observation on qualitative characters
3.2.2. Observation on physical properties of wood
3.2.3. Effect of species on soil physico-chemical parameters

3.3. Observation for different Casuarina species with monoecy and Dioecy
3.3.1. Phenology of Casuarina species
3.3.2. Observation on male floral morphological traits of Casuarina species
3.3.3. Observation on female floral morphological traits in Casuarina species
3.3.4. Reproductive biology of different Casuarina species
3.4.1. Morphological quantitative parameters of cone
3.4.2. Morphological qualitative parameters of seed
3.4.3. Morphological traits for seed grade

3.5. Observation on seed germination
3.5.1. Speed of seed germination
3.5.2. Seed vigor index
3.5.3. Effect of different substrates on seed germination
3.5.4. Influence of tetrazolium test for seed viability
3.5.5. Influence of pretreatments on seed germination

3.6.1. Performance of seedlings in half sib population
3.6.2. Total seedling biomass productivity
3.6.3. Estimation of biochemical parameters in half sib population
3.6.4. Estimation of chlorophyll content
3.6.5. Estimation of free proline content

3.7. Statistical analysis
RESULTS

4.1. Growth performance of five *Casuarina* species

4.2.1. Growth performance of five *Casuarina* species in field

4.2.2. Growth performance of species in terms of qualitative parameters

4.2.3. Physical properties of wood parameters in five *Casuarina* species

4.2.4. Effect of five *Casuarina* species on physico-chemical parameters of soil

4.3. Different *Casuarina* species with monoecy and dioecy characters

4.3.1. Phenology of five *Casuarina* species

4.3.1.1. Phenology of male flower

4.3.1.2. Phenology of female flower

4.3.1.3. Phenology of fruiting

4.3.1.4. Fruit collection

4.3.2. Qualitative traits of male flowers in *Casuarina* species

4.3.3. Qualitative traits of female flowers in *Casuarina* species

4.3.4. Reproductive biology of five *Casuarina* species

4.4.1. Morphological quantitative traits of fruit in five *Casuarina* species

4.4.2. Morphological qualitative traits of seed in five *Casuarina* species

4.4.3. Morphological traits of seed for grading in five *Casuarina* species

4.5.1. Speed of seed germination in five *Casuarina* species

4.5.2. Seed vigor in five *Casuarina* species

4.5.3.1. Influence of substrata for seed germination in five *Casuarina* species (fresh seed)

4.5.3.2. Influence of substrata for seed germination in five *Casuarina* species (3 month after storage)

4.5.3.3. Influence of substrata for seed germination in five *Casuarina* species (6 month after storage)

4.5.3.4. Influence of substrata for seed germination in five *Casuarina* species (9 month after storage)

4.5.3.5. Influence of substrata for seed germination in five *Casuarina* species (12 month after storage)

4.5.3.6. Influence of substrata for seed germination in five *Casuarina* species (15 month after storage)

4.5.3.7. Influence of substrata for seed germination in five *Casuarina* species (18 month after storage)
4.5.3.8. Influence of substrata for seed germination in five *Casuarina* species (21 month after storage)

4.5.3.9. Influence of TZ method for seed viability in five *Casuarina* species

4.5.4. Influence of pre-sowing treatments on seed germination

4.5.4.1. Influence of pre-sowing treatments on seed germination in five *Casuarina* species (fresh seed)

4.5.4.2. Influence of pre-sowing treatments on seed germination in five *Casuarina* species (3 month after storage)

4.5.4.3. Influence of pre-sowing treatments on seed germination in five *Casuarina* species (6 month after storage)

4.5.4.4. Influence of pre-sowing treatments on seed germination in five *Casuarina* species (9 month after storage)

4.5.4.5. Influence of pre-sowing treatments on seed germination in five *Casuarina* species (12 month after storage)

4.5.4.6. Influence of pre-sowing treatments on seed germination in five *Casuarina* species (15 month after storage)

4.5.4.7. Influence of pre-sowing treatments on seed germination in five *Casuarina* species (18 month after storage)

4.5.4.8. Influence of pre-sowing treatments on seed germination in five *Casuarina* species (21 month after storage)

4.6.1. Performance of half sib progenies over a different period in five *Casuarina* species

4.6.2. Performance of half sib progenies over period of 12 month after sowing in five *Casuarina* species

4.6.3. Total seedling biomass of half sib population in five *Casuarina* species

4.6.4. Total nitrogen content in half sib population of five *Casuarina* Species

4.6.5. Total chlorophyll and free proline content in half sib population of five *Casuarina* species

4.7. Analysis of variance for tree biomass and its components

4.7.1. Variation for tree biomass and its components

4.8.1. Association between tree biomass and its attributing traits both at genotypic and phenotypic levels

4.8.2. Path coefficient analysis

4.8.2.1. Direct effect for tree biomass and its attributing traits at genotypic Level

4.8.2.2. Indirect effects for tree biomass and its attributing traits at genotypic level

4.8.3. Direct effect for tree biomass and its attributing traits at phenotypic Level

4.8.3.1. Indirect effects for tree biomass vs. its attributing traits at phenotypic level

4.8.4. Genetic divergence

4.8.4.1. Mahalanobis $D^2$ analysis
4.8.4.2. Group constellation
4.8.4.3. Average intra and inter cluster distances
4.8.4.4. Average intra and inter cluster $D^2$ values
4.8.4.5. Cluster means performance
4.8.4.6. Contribution of different characters to genetic divergence

DISCUSSION
5.1. Analysis of variance for tree biomass and its components
5.2.1. Growth performance of five *Casuarina* species
5.2.2. Physical properties of wood parameters in five *Casuarina* species
5.2.3. Effect of five *Casuarina* species on physico-chemical parameters of soil
5.3. Phenology of five *Casuarina* species
5.3.1. Phenology of male and female flower in five *Casuarina* species
5.3.2. Morphology of female flower in five *Casuarina* species
5.3.3. Reproductive biology of five *Casuarina* species
5.4.1. Quantitative morphological characters of cone
5.4.2. Qualitative morphological characters of seed
5.5.1. Influence of seed size for germination in five *Casuarina* species
5.5.2. Speed of seed germination in five *Casuarina* species
5.5.3. Seed vigor in five *Casuarina* species
5.5.4. Influence of substratas for increases on seed germination in five *Casuarina* species
5.5.5. Influence of tetrazolium method on seed viability in five *Casuarina* species
5.5.6. Influence of pre sowing treatments on seed germination
5.6. Performance of half sib progenies in five *Casuarina* species
5.6.1. Total seedling biomass in five *Casuarina* species
5.6.2. Total nitrogen content in half sib population
5.6.3. Total chlorophyll in half sib population
5.6.4. Free proline content in half sib progenies
5.7.1. Variation for tree biomass and its components
5.7.2. Heritability and genetic advance
5.8. Correlation coefficient analysis
5.9. Path coefficient analysis in five *Casuarina* species
5.10. Genetic diversity among the five *Casuarina* species
5.10.1. $D^2$ analysis
5.10.2. Group constellation pattern of *Casuarina* species
5.10.3. Contribution of different characters to genetic divergence
5.10.4. Cluster means performance

FUTURE LINE OF WORK
6  SUMMARY  192-197
   6.1. Growth performance of five *Casuarina* species
   6.2. Phenology of five *Casuarina* species
   6.3. Variability of cone / seed parameters in five species
   6.4. To find out the suitable substratas and pretreatments to improve seed
        Germination
   6.5. Variability of half sib progenies in five *Casuarina* species
