LIST OF FIGURES

Fig. 1.1 occurrence rate of sickle cell anemia gene in India as per 2002 census .................................................. 19
Fig. 1.2 Awareness logo ........................................................................................................................................... 26
Fig. 2.1 Distribution of sickle cell allele and Distribution of Malaria................................................................. 39
Fig. 2.2 Chromosomal organizations of α- and β-globin gene clusters ................................................................. 42
Fig. 2.3 Inheritance of sickle genes from parent, couple has one chance in four that child will be normal, one chance in four that child will have sickle cell disease and two chances in four that child will be sickle cell trait 45
Fig. 2.4 Change in red blood cell membrane by polymers of sickle hemoglobin. .......................................................... 48
Fig. 2.5 Abnormal, sickle cell induce expression of inflammatory and coagulation inflammatory mediators. ................................................................................................................................. 53
Fig. 2.6 Role of reperfusion physiology in red blood corpuscle ................................................................. 57
Fig. 2.7 Relationship of hemolysis to vascular dysfunction. ........................................................................... 59
Fig. 2.8 Hand- foot syndrome in bones of sickle cell child. ............................................................................ 65
Fig. 2.9 Leg ulcers in patient of sickle cell anemia ......................................................................................... 72
Fig. 3.1 Age wise hemoglobin concentration. ........................................................................................................ 87
Fig. 3.2 Morphological features of sickle cell anemia .................................................................................... 103
Fig. 3.3 Prevalence rate of sickle cell anemia in India ...................................................................................... 119
Fig. 3.4 Gujarat state map ................................................................................................................................. 120
Fig. 3.5 Figures adopted from 2011 census report of valsad district .......................................................... 121
Fig. 3.6 Taluka of valsad district .......................................................................................................................... 122
Fig. 3.7 Caste and gender wise distribution of participants ............................................................................ 127
Fig. 3.8 Taluka wise comparison on awareness on blood group ........................................................................ 128
Fig. 3.9 Caste wise awareness on blood group in participants ........................................................................ 129
Fig. 3.10 Taluka wise comparison on awareness on Polio program ........................................................... 130
Fig. 3.11 Results of students heard about sickle cell anemia ........................................................................... 131
Fig. 3.12 Results of Taluka wise awareness on autosomal nature of disease. .................................................. 132
Fig. 3.13 Result on castewise awareness on autosomal nature of disease ....................................................... 133
Fig. 3.14 Result of total caste and gender wise distribution of participant ..................................................... 136
Fig. 3.15 Awareness on blood group in participants ....................................................................................... 137
Fig. 3.16 Result of students heard about sickle cell anemia ......................... 139
Fig. 3.17 Results of awareness about currently successful program of Polio .. 140
Fig. 3.18 Results of awareness on autosomal nature of sickle cell anemia..... 141
Fig. 3.19 Result of awareness on government program on sickle cell anemia
control.................................................................................................... 143
Fig. 3.20 Results of comparison of sickle cell and Polio program............... 146
Fig. 3.21 Result of caste and gender wise distribution of participants ............ 148
Fig. 3.22 Results of awareness on blood group in participants.................... 149
Fig. 3.23 Result of participants heard about sickle cell anemia .................... 150
Fig. 3.24 Results of awareness on currently successful program of Polio ...... 151
Fig. 3.25 Results of awareness on autosomal nature of sickle cell anemia..... 152
Fig. 3.26 Results of awareness on government program on sickle cell anemia
control.................................................................................................... 154
Fig. 3.27 Results of basic information of participants involved in study ........... 156
Fig. 3.28 Results of awareness on blood group in participants.................... 157
Fig. 3.29 Result of participants heard about sickle cell anemia .................... 158
Fig. 3.30 Results on awareness on Polio program ....................................... 159
Fig. 3.31 Results of awareness on autosomal nature of sickle cell anemia..... 160
Fig. 3.32 Results of basic information of participants involved in study ........... 163
Fig. 3.33 Result of participants heard about sickle cell anemia .................... 164
Fig. 3.34 Result on participants awareness about Polio program .................. 165
Fig. 3.35 Results of awareness on autosomal nature of sickle cell anemia..... 166
Fig. 3.36 Results of basic information of participants involved in study ........... 168
Fig. 3.37 Results of awareness on blood group in participants.................... 169
Fig. 3.38 Result of participants heard about sickle cell anemia .................... 171
Fig. 3.39 Results of participants awareness about polio program ................. 172
Fig. 3.40 Results of awareness on autosomal nature of sickle cell anemia..... 173
Fig. 3.41 Result of awareness on government program on sickle cell anemia
control.................................................................................................... 174
Fig. 3.42 Results of basic information of participants involved in study ........... 176
Fig. 3.43 Result of participants heard about sickle cell anemia .................... 177
Fig. 3.44 Awareness about currently successful program of Polio ............... 178
Fig. 3.45 Results of awareness on autosomal nature of sickle cell anemia..... 179
Fig. 3.46 Result of awareness on government program on sickle cell anemia control

Fig. 3.47 Results of basic information of participants involved in study

Fig. 3.48 Results of awareness on blood group in participants

Fig. 3.49 Result of participants heard about sickle cell anemia

Fig. 3.50 Results of awareness about currently successful program of Polio

Fig. 3.51 Results of awareness on autosomal nature of sickle cell anemia

Fig. 3.52 Result of awareness on government program on sickle cell anemia control

Fig. 3.53 Results of basic information of participants involved in study

Fig. 3.54 Results of awareness on blood group in participants

Fig. 3.55 Result of participants heard about sickle cell anemia

Fig. 3.56 Result of participants' awareness on Polio

Fig. 3.57 Outcome of awareness on autosomal nature of sickle cell anemia

Fig. 3.58 Result of awareness on government program on sickle cell anemia control

Fig. 3.59 Results of basic information of participants involved in study

Fig. 3.60 Results of awareness on blood group in participants

Fig. 3.61 Result of participants heard about sickle cell anemia

Fig. 3.62 Results of participants' awareness on Polio

Fig. 3.63 Results of awareness on autosomal nature of sickle cell anemia

Fig. 3.64 Result of awareness on government program on sickle cell anemia control

Fig. 3.65 Results of basic information of participants involved in study

Fig. 3.66 Results of awareness on blood group in participants

Fig. 3.67 Result of participants heard about sickle cell anemia

Fig. 3.68 Results of participants' awareness on Polio program

Fig. 3.69 Results of awareness on autosomal nature of sickle cell anemia

Fig. 3.70 Result of awareness on government program on sickle cell anemia control

Fig. 3.71 Results of basic information of participants involved in study

Fig. 3.72 Results of awareness on blood group in participants

Fig. 3.73 Result of participants heard about sickle cell anemia

Fig. 3.74 Awareness about currently successful program of Polio
Fig. 3.75 Awareness about inheritance nature of sickle cell anemia ............... 223
Fig. 3.76 Result of awareness on government program on sickle cell anemia control.......................................................... 225
