CONTENTS

Chapter-I Introduction: Drugs-importance and assay
(a) Historical evolution of drugs 3
(b) Biological and medical terms used in the study of drugs 10
(c) Dosage forms 14
(d) The role of analytical chemistry in pharmacy 17

Chapter-II Survey of literature and objectives of the present investigation
Section (i): Survey of literature of selected drugs 20
Section (ii): Objectives of the present investigation 59

Chapter-III Material and Instruments 62-86
Section (i): Preparation of Reagents and solutions 62
Section (ii): Brief profile of selected drugs 66
Section (iii): Brief description of instruments employed 83

Chapter-IV Visible Spectrophotometric determination of selected drugs by Ion pair complex method
Section (i): Assay of Ramipril 91
Section (ii): Assay of Esomeprazole magnesium 112
Section (iii): Assay of Tenofovir disoproxil fumarate 134

Chapter-V Spectrophotometric determination of selected drugs by DDQ method
Section (i): Assay of Pragabalin 158
Section (ii): Assay of Ketorelac tromethamine 167
Section (iii): Assay of Tenofovir disoproxil fumarate 176

Chapter-VI Spectrophotometric determination of selected drugs by Diazotisation method
Section (i): Diazotisation and coupling reaction of Lamotrigine with resorcinol 188
Section (ii): Diazotisation and coupling reaction of Cisapride with resorcinol 201
Section (iii): Diazotisation and coupling reaction of Metoclopramide with resorcinol 214

Chapter-VII Summary 227
