ACKNOWLEDGEMENTS

In preparing this thesis, I have received generous help from several individuals, without which this work would not have taken the present form. I, therefore, would like to place on record my indebtedness to them for their contribution.

The National Institute of Rural Development, where I have been employed, accorded me the necessary permission to carry out my research work and I am grateful to the institute for this kind gesture. I am particularly thankful to Dr. T.B.Lahiri, Director (CMP) for his concern about my career advancement.

I owe much to my supervisor, Professor V T Naidu, Chairman, Board of Studies, Department of Rural Development, Sri Krishnadevaraya University, Anantapur, for his unstinted support and guidance throughout.

Several of my colleagues at NIRD deserve special appreciation for their help, especially Dr. K.Hanumantha Rao, who evinced keen interest in my work and read all the draft chapters and offered valuable suggestions whenever approached. Shri Rajendar R Herman, Er. V.Madhavaraao, and Dr. D. Shanthudu gave not only critical inputs but also helped in the analysis and computerisation of the data.

Further, I wish to acknowledge my thanks to Shri D.Jayanandam for providing cartographic support and Shri B.Adiratnam for providing computer prints of the draft chapters of the thesis neatly.

I am also thankful to the Sericulture farmers in the study area and officials of the Department of Sericulture for their willing cooperation in sparing their time and valuable information. Finally in a special way, I am greatly indebted to my wife and children for their interest, devotion and encouragement.

A.NAGASESHANNA
