LIST OF PAPERS PRESENTED AT CONFERENCES, PUBLICATIONS AND COMMUNICATED:

Communicated for the publication in the form a paper entitled “Role of Safe Drinking Water in Controlling Waterborne Diseases in Anantapur District- A Study of SSSWSP.” to the Journal of Rural and Development (JRD), Hyderabad on dated 21st October 2007.

"Underneath the verandah in front of the room in which the Mahatma was born, in the space enclosed by the three wings of the house, is an underground reservoir, 20 feet long, 20 feet wide and 15 feet deep, with a capacity of 20 thousand gallons, for storing rainwater for domestic use. The well water in Porbandar, owing to its vicinity to the sea, is brackish, hard and unfit for cooking. Rainwater was, therefore, collected and stored in the underground reservoir for use the year round. The terrace on the top floor, carefully washed before the first monsoon showers, served as catchment for the water, running down a pipe straight into the tank. A heap of lime at the mouth of the pipe served to filter and purify the water".

In this house five generation of Gandhis lived and prospered.

-Mahatma Gandhi

The Early Phase, Vol 1 by Shri Pyarelal.
