Acknowledgements

I am very much indebted and have great pleasure in expressing my deep sense of gratitude to my supervisor Prof. Mohd. Hasan Department of Electronics Engineering Aligarh Muslim University Aligarh, for his creative ideas, instructive guidance, expert advice and sparing his time. His advice and research attitude have provided me with a model for my entire future career. Without him this work would have not been completed. He was always at hand for his valuable suggestion and critical evaluation of theoretical and simulated results. He provided the necessary facilities for conducting the experimental work. For this and much more I am deeply grateful to him.

Appreciation is expressed to Naushad Alam who gave me a great help during simulation of different FPGAs block on Hspice tools.

A special thank goes to my friends Israil, Sachin and Amin for their helps in proof-reading of this dissertation.

Finally, I would like to thank, although this is too weak a word, my late father and all the other family members for their continual encouragement and support throughout this work.
