Acknowledgements

First and foremost, I take this opportunity to express my great reverence to my research supervisor, Professor Birinchi Kumar Das, for his constant inspiration, invaluable guidance, generous attitude and constructive criticism throughout the tenure of the research work. My deepest personal regards are due for him forever for making me aware of the modern scientific research.

I would like to thank all my teachers as well as HoD, Department of Chemistry, G.U. for their valuable suggestions and encouragements during the period of my research work. I especially thank Prof. J. N. Ganguly and Prof. A. K. Talukdar for their valuable and encouraging suggestions.

I offer my sincere thanks to Dr. D. Srinivas, Chief Scientist, Catalysis Division (Heterogeneous), National Chemical Laboratory, Pune for enabling me to spend a couple of months in his laboratory for carrying out certain aspects of the synthesis and catalytic work described in this thesis.

I would like to extend my deep appreciation to all my lab mates namely Nath, Zinnat, Suku, Dhiru, Palash, Monsumi and Sourav for their cooperation and love. I also sincerely thank all my senior lab mates and other research students of this department. I would love to thank my friends namely Azahar, Dhaneswar, Bhogesh and Devdutt.

I sincerely acknowledge Dr. S. Karmakar, Scientific Officer, Department of USIC, G.U. for his valuable help in obtaining and analyzing powder XRD data.

It gives me immense pleasure to acknowledge my family members, especially my mother for their love, unfailing support, patience and encouragement during the entire period of my studies.

Finally I gratefully acknowledge the Council of Scientific & Industrial Research (CSIR), India for providing me the Junior and Senior Research Fellowship.

Md. Ruhul Amin Bepari
