Chapter-1
1.1 The Demand For Transport 1-1
1.2 The Role of Infrastructure in Transport Operation 1-1
1.3 The Nature of Transport Demand 1-2
1.4 Demarcating the Research Query 1-2
1.5 Forecasting / Estimating the Transport Demand: the necessity of model(s) 1-3
1.6 Travel Demand Models- the model applied in this Analysis 1-5
1.7 The Area of Application and the Logic Behind 1-5
1.8 The Sequence of the Discussion 1-6

Chapter-2
2.1 Introduction 2-1
2.2 The Externalities of Transport 2-1
2.3 The Effect of Natural Monopoly in Transport Operation 2-1
2.4 Advent of Urban Planning: a concise history 2-3
2.5 Objectives of a Transport Plan 2-4
2.6 The Imbalance in Transport Demand and Supply 2-5
2.7 The Difference in Travel Pattern between Developed and Developing countries 2-6
2.8 The Indian and West Bengal Perspective 2-8

Chapter-3
3.1 Transport Demand: an in-depth analysis 3-1
3.2 A Brief Historical Excursus 3-1
3.3 The Micro Economic Framework for Transportation Demand Analysis 3-1
3.4 Urban Travel Demand Models- The importance of Choice 3-4
3.5 Modelling Approaches in Urban Travel Demand Analysis 3-5
3.5.1 Direct Approach 3-6
3.5.2 Sequential Type / Approach 3-7
3.6 Deficiencies in Aggregate Modelling Approaches 3-11
3.7 Waiving the Deficiencies- need for an alternative modeling approach 3-11
3.8 Incorporating the Elements of Behavioralness and Policy sensitiveness 3-11
3.9 Disaggregate Model Framework-a practicable approach in depicting travel decisions 3-12
3.10 Disaggregate Models- their main features 3-13
3.11 Types of Disaggregate models 3-14
3.11.1 Deterministic Choice Models 3-14

Chapter 3

3.11.2 Stochastic Choice Models 3-14
3.12 Choosing the Bounds of the Research Query 3-15
3.13 Defining the Size of the Urban Area 3-15
3.14 The Situation Prevalent in West Bengal 3-16
3.15 The Selected Towns 3-16
   3.15.1 Haldia Municipal Area 3-17
   3.15.2 Howrah Municipal Area 3-19
   3.15.3 Prominent Negative Externalities 3-21
      3.15.3.1 Haldia Municipal Area 3-21
      3.15.3.2 Howrah Municipal Area 3-22

Chapter 4

4.1 Introduction 4-1
4.2 Mapping the Domain of the Attempted Travel Demand Estimation 4-1
4.3 The Importance of Mode-choice Models in Disaggregate Travel Demand Estimation 4-2
4.4 Disaggregate Stochastic Models- the working framework 4-2
4.5 The Estimation Procedure 4-5
4.6 Applying the mode-choice model-the requirements 4-6
4.7 The Key Attributes in Mode-choice 4-6
4.8 Determining the Form of the Choice Function 4-8
4.9 The Final Form of the Choice Function 4-8
   Applied in this Study 4-8
4.10 Acquisition of Data 4-9
4.11 Need for Transforming the Available Data 4-9
4.12 Limitations of the Transformed Data 4-9
4.13 Generating the Data-base required for this Study 4-10
   4.13.1 Haldia Municipal Area 4-10
   4.13.2 Howrah Municipal Area 4-10
4.14 Shaping the RITES Data to the Desired Form 4-10

Chapter 5

5.1 Introduction 5-1
5.2 Analyzing the Significance of the Estimated Parameters 5-83
   5.2.1 Haldia Municipal Area 5-83
   5.2.2 Howrah Municipal Area 5-85
5.3 Derivation from Choice Probability Estimates for the Trip-makers of the Various Income-classes 5-87 / 5-87
   5.3.1 Haldia Municipal Area 5-87
   5.3.2 Howrah Municipal Area 5-95
Chapter-6

6.1 Policy Measures for Combating the Deficiencies 6-1
6.2 General Policies 6-1
   6.2.1 Short-term Measures 6-2
   6.2.2 Long-term Measures 6-5 / 6-6
6.3 Mode Specific Policies 6-7
   6.4 Developing an Effective Public Passenger Transport (PTS) System for Haldia and Howrah Townships 6-7
6.5 Enhancing the Safety and Comfort of the Modes 6-7

Chapter-7

7.1 Introduction 7-1
7.2 Limitation(s) of the Multinomial Logit Model 7-1
7.3 Remedy to the Limitation 7-1
7.4 Reasons for its Exclusion in the Present Study 7-2
7.5 The Deficiency in the Urban Travel Demand Models 7-2
7.6 Alternative Approach towards Modelling Urban Travel Demand 7-3

Appendices
A Mathematical Derivations A
B Secondary Data B
C Generated Data C
D Flow-charts and Diagrams D
