</tbody>
</table>
15. Chloride content of milk obtained from different sources in different places

16. Methylene Blue reduction test of milk obtained from different sources in and around Courtallam

17. Microbial population of milk obtained from different sources in and around Courtallam

18. Coliform count of milk obtained from different sources in and around Courtallam

19. Concentration of *Bacillus cereus* of milk obtained from different sources in and around Courtallam

20. *Staphylococcus aureus* concentration of milk obtained from different sources in and around Courtallam

21. Yeast and mold count of milk obtained from different sources in and around Courtallam

22. Biochemical constituents of milk obtained from Co-operative milk producer's society

23. Concentration of various bacteria present in the milk of Co-operative milk producer's society

24. Correlation matrix between sources and milk parameters at Tenkasi

25. Correlation matrix between sources and milk parameters at Melagaram

26. Correlation matrix between sources and milk parameters at Courtallam

27. Correlation matrix between sources and milk parameters at Shencottah

28. Correlation matrix between sources and milk parameters at Viswanathapuram

29. Biochemical composition of packaged milk available in and around Courtallam
30. Mineral constituents of packaged milk sold in and around Courtallam

31. Microbial pattern of packaged milk sold in and around Courtallam

32. Moisture content of butter obtained from three sources in different villages before and after 30 days of storage at 4±1°C

33. Acidity of butter obtained from three sources in different villages before and after 30 days of storage at 4±1°C

34. Fat content of butter obtained from three sources in different villages before and after 30 days of storage at 4±1°C

35. Chloride content of butter obtained from three sources in different villages before and after 30 days of storage at 4±1°C

36. Microbial population of butter samples taken fresh and 30 days after storage at 4±1°C from three sources in different villages

37. Coliform count of fresh butter samples and 30 days after storage at 4±1°C from three sources in different villages

38. Proteolytic count of fresh butter samples and 30 days after storage at 4±1°C from three sources in different villages

39. Lipolytic organism of fresh butter samples and 30 days after storage at 4±1°C from three sources in different villages

40. Psychrotrophic count of fresh butter samples and 30 days after storage at 4±1°C from three sources in different villages

41. Yeast and mold count of fresh butter samples and 30 days after storage at 4±1°C from three sources in different villages

42. Summary of level of significance between places and sources on storage for 30 days at 4±1°C

43. Correlation matrix between sources and butter parameters at Tenkasi

44. Correlation matrix between sources and butter parameters at Melagaram
45. Correlation matrix between sources and butter parameters at Courtallam

46. Correlation matrix between sources and butter parameters at Shencottah

47. Correlation matrix between sources and butter parameters at Viswanathapuram

48. pH pattern of dahi obtained from various sources and places

49. Acidity content of dahi obtained from various sources and places

50. Fat concentration of dahi obtained from various sources and places

51. Protein content of dahi obtained from various sources and places

52. Microbial population of dahi obtained from various sources and places

53. Coliform count of dahi obtained from various sources and places

54. *Bacillus cereus* count of dahi obtained from various sources and places

55. *Staphylococcus aureus* levels in dahi obtained from various sources and places

56. Yeast and mold count of dahi obtained from various sources and places

57. Correlation matrix between sources and dahi parameters at Tenkasi

58. Correlation matrix between sources and dahi parameters at Melagaram

59. Correlation matrix between sources and dahi parameters at Courtallam
60. Correlation matrix between sources and dahi parameters at Shencottah

61. Correlation matrix between sources and dahi parameters at Viswanathapuram

62. Biochemical profile of khoa obtained from shop and vendor in and around Courtallam

63. Microbial pattern of khoa obtained from shop and vendor in and around Courtallam

64. Level of significance for biochemical and microbiological parameter of khoa samples obtained from shop and vendor in and around Courtallam

65. Biochemical profile of commercially available ice creams in and around Courtallam

66. Microbial pattern of commercially available ice creams in and around Courtallam

67. Level of significance between A and other brands of ice creams in its biochemical and microbiological parameters

68. Level of significance between B and other brands of ice creams in its biochemical and microbiological parameters

69. Level of significance between C and other brands of ice creams in its biochemical and microbiological parameters

70. Level of significance between D, E, G and F brands of ice creams in its biochemical and microbiological parameters

71. Biochemical tests carried out with milk and milk products to confirm the occurrence of *Bacillus cereus* and *Staphylococcus aureus*.
