CONTENTS

INTRODUCTION ...1

REVIEW OF LITERATURE ...5

MATERIALS AND METHODS ...46

RESULTS AND DISCUSSION ...64

Physiological and biochemical marker traits for screening horsegram
Relative water content ...65
Cell membrane injury ...65
Total chlorophyll content ...66
Free proline content ...66
Superoxide dismutase activity ...66
Lipid peroxidation ...67

Cloning, characterization and expression of NAC Transcription Factor family genes from drought tolerant horsegram ...70
Identification of NAC transcription factors ...72

Isolation, cloning and characterization of NAC transcription factors: NAC1, NAC4 and NAC15 genes ...73
Identification and isolation of the MuNAC1 gene ...74
Sequence analysis of MuNAC1 gene ...75
MuNAC1 multiple sequence alignment and phylogenetic analysis ...75
Localization of MuNAC1 ...77
Horsegram MuNAC1 transcription factor expression in response to different environmental stresses by qRT-PCR analysis ...77
Identification and isolation of the MuNAC4 gene ...80
Sequence analysis of MuNAC4 gene ...81
Multiple sequence alignment and phylogenetic analysis of MuNAC4 ...81

Localization of MuNAC4 ...83

Horsegram NAC4 transcription factor expression in response to different environmental stresses by qRT-PCR analysis ...83

Identification and isolation of the MuNAC15 gene ...85

Sequence analysis of MuNAC15 gene ...86

MuNAC15 multiple sequence alignment and phylogenetic analysis ...86

Localization of MuNAC15 gene ...87

MuNAC15 transcription factor expression in response to different environmental stresses by qRT-PCR analysis ...87

Transcript expression profile of stress responsive transcription factors from horsegram ...90

Expression profile of MuNAC2, MuNAC3, MuNAC5 and MuNAC6 TF genes under various abiotic stresses ...90

Expression profile of MuZnFC2H2, MuZnFC3HC4, MuHLH, MuDEAH box RNA helicase transcription factor genes and Mu70 kDa heat shock protein under various abiotic stress conditions ...91

DISCUSSION ...93

SUMMARY ...98
