## CONTENTS

1. **INTRODUCTION**
   1.1 Origin and distribution
   1.2 Narrow genetic diversity
   1.3 Broadening the genetic base for biotic and abiotic stresses
   1.4 Germplasm resources
      1.4.1 1981 IRRDB collection
      1.4.2 Characterisation, evaluation and utilisation of wild germplasm
   1.5 Genetic studies
      1.5.1 Coefficients of variation
      1.5.2 Heritability and genetic advance
      1.5.3 Correlation
      1.5.4 Genetic divergence
   1.6 Objectives of the study

2. **MATERIALS AND METHODS**
   2.1 Location
   2.2 Experimental materials
   2.3 Experimental methods
      2.3.1 Descriptors for juvenile characterisation
      2.3.2 Morphological characters
      2.3.3 Stomatal characters
      2.3.4 Leaf anatomical investigations
      2.3.5 Bark anatomical investigations
      2.3.6 Photography
   2.4 Statistical methods
      2.4.1 Genetic variability
         2.4.1.1 Analysis of variance
      2.4.2 Genetic parameters
         2.4.2.1 Phenotypic and genotypic variance
         2.4.2.2 Coefficients of variation
         2.4.2.3 Heritability in the broad sense
         2.4.2.4 Genetic advance
      2.4.3 Correlation
      2.4.4 Factor analysis
      2.4.5 Genetic divergence
      2.4.6 Performance index
3. RESULTS

3.1 Juvenile characterisation 31

3.2 Genetic variability 50

3.2.1 Analysis of variance 50

3.2.2 General performance of the wild genotypes 53

3.2.2.1 Morphological characters 53

3.2.2.2 Test tap yield over three years 65

3.2.2.3 Leaf structural characters 68

3.2.2.4 Bark structural characters 78

3.2.3 Provenance-wise comparison of performance 89

3.2.3.1 Morphological characters 89

3.2.3.2 Test tap yield over three years 89

3.2.3.3 Leaf structural characters 93

3.2.3.4 Bark structural characters 95

3.3 Genetic parameters 97

3.3.1 Phenotypic and genotypic coefficients of variation 98

3.3.1.1 Morphological characters 98

3.3.1.2 Test tap yield over three years 99

3.3.1.3 Leaf structural characters 100

3.3.1.4 Bark structural characters 101

3.3.2 Heritability (broad sense) 102

3.3.2.1 Morphological characters 102

3.3.2.2 Test tap yield over three years 103

3.3.2.3 Leaf structural characters 103

3.3.2.4 Bark structural characters 103

3.3.3 Genetic advance 104

3.3.3.1 Morphological characters 104

3.3.3.2 Test tap yield over three years 104

3.3.3.3 Leaf structural characters 104

3.3.3.4 Bark structural characters 105

3.4 Character associations 105

3.4.1 Morphological characters 105

3.4.2 Leaf structural characters 107

3.4.3 Bark structural characters 111

3.5 Factor analysis 119

3.6 Genetic divergence- D² analysis 121

3.7 Performance index 123

(vii)
4 Discussion

4.1 Juvenile characterisation

4.2 Genetic variability
  4.2.1 Analysis of variance
  4.2.2 Performance of the wild genotypes
    4.2.2.1 Morphological characters
    4.2.2.2 Test tap yield over three years
    4.2.2.3 Leaf structural characters
    4.2.2.4 Bark structural characters
  4.2.3 Provenance-wise performance of the wild genotypes
    4.2.3.1 Morphological characters
    4.2.3.2 Test tap yield over three years
    4.2.3.3 Leaf structural characters
    4.2.3.4 Bark structural characters

4.3 Genetic parameters
  4.3.1 Phenotypic and genotypic coefficients of variation
    4.3.1.1 Morphological characters
    4.3.1.2 Test tap yield over three years
    4.3.1.3 Leaf structural characters
    4.3.1.4 Bark structural characters
  4.3.2 Heritability (broad sense)
    4.3.2.1 Morphological characters
    4.3.2.2 Test tap yield over three years
    4.3.2.3 Leaf structural characters
    4.3.2.4 Bark structural characters
  4.3.3 Genetic advance
    4.3.3.1 Morphological characters
    4.3.3.2 Test tap yield over three years
    4.3.3.3 Leaf structural characters
    4.3.3.4 Bark structural characters

4.4 Character associations
  4.4.1 Morphological characters
  4.4.2 Leaf structural characters
  4.4.3 Bark structural characters

4.5 Factor analysis

4.6 Genetic divergence - D² analysis

4.7 Performance index

Cross sectional view of the laminae of two Rondonian genotypes having thin and thick palisade layer.

Cross sectional view of the laminae of two Mato Grosso genotypes having thin and thick palisade layer.

Cross sectional view of the laminae of two Acre genotypes having thin and thick spongy tissues.

Cross sectional view of the laminae of two Rondonian genotypes having thin and thick spongy layer.

Cross sectional view of the laminae of two Mato Grosso genotypes having thin and thick spongy layer.

Sections of the bark of a wild genotype showing the alignment of tissues in transverse, tangential longitudinal and radial longitudinal sections.

Radial longitudinal sections of the bark of two Acre genotypes with low number of latex vessel rows distantly placed and more number of latex vessel rows closely placed.

Radial longitudinal sections of the bark of two Rondonian genotypes with low number of latex vessel rows distantly placed and more number of latex vessel rows closely placed.

Radial longitudinal sections of the bark of two Mato Grosso genotypes with low number of latex vessel rows distantly placed and with more number of latex vessel rows closely placed.

Laticifers of Acre genotypes - narrow and large laticifers.

Laticifers of Rondonian genotypes - narrow and large laticifers.

Laticifers of Mato Grosso genotypes - narrow and large laticifers.

Tangential longitudinal sections of the bark of two Acre genotypes with lesser and more number of laticifers.

Tangential longitudinal sections of the bark of two Rondonian genotypes with lesser and more number of laticifers.

Tangential longitudinal sections of the bark of two Mato Grosso genotypes with lesser and more number of laticifers.

Epidermal peeling of the adaxial surface of the lamina showing absence of stomata.

Epidermal peeling of the abaxial surface of the lamina showing stomata.
