# CONTENTS

1. INTRODUCTION  
   1.1 Vitamin C  
   1.2 Folic acid  
   1.3 Vitamin E  
   1.4 Vitamin K  

2. MATERIALS AND METHODS  
   2.1 Experimental fish  
   2.2 Classification of test fish  
   2.3 Diet preparation  
   2.4 Experimental procedure  
   2.5 Growth data analysis  
   2.6 Haematological analysis  
      2.6.1 Collection of peripheral blood sample  
      2.6.2 Haematocrit value  
      2.6.3 Erythrocyte sedimentation rate  
      2.6.4 Haemoglobin content  
      2.6.5 Erythrocyte constants  
      2.6.6 Erythrocyte counts  
      2.6.7 Leukocyte count  
      2.6.8 Differential blood count
2.7 Biochemical analysis 30
  2.7.1 Vitamin C analysis 30
  2.7.2 Determination of dry mater content 32
  2.7.3 Determination of ash 33
  2.7.4 Determination of calcium 34

2.8. Statistical analysis 35

3. RESULTS 36

  3.1 Experimental diets 36
  3.2 Survival and growth responses 37
  3.3 Haematological analysis 42
  3.4 Biochemical analysis 57
  3.5 Deficiency signs 60
  3.6 Ascorbate requirements 62
  3.7 Folate requirement 64
  3.8 Vitamin requirement 65
  3.9 Menadione requirement 65
  4.0 Recommended vitamin levels 66

4. DISCUSSION 67

5. SUMMARY
