CHAPTER-1	INTRODUCTION	1-6
CHAPTER-2	REVIEW OF LITERATURE	7-78
2.1	Creatinine level in pathological conditions	9
2.2	Clinical significance of creatinine determination	10
2.2.1	Disease associated with high creatinine concentration in serum	12
2.2.2	Disease associated with low creatinine concentration in serum	16
2.3	Metabolism of creatinine	17
2.4	Enzymes used in creatinine determination	20
2.4.1	Creatininase (Creatinine amidohydrolase, CA) and creatinase (creatine amidinohydrolase, CI)	20
2.4.2.	Sarcosine oxidase (SO)	22
2.5	Various methods for determination of creatinine	24
2.5.1	Chemical methods	24
2.5.2.	Enzymatic methods	29
2.5.3	Chromatographic methods	32
2.5.3.1	High performance thin-layer chromatography (HPTLC)	32
2.5.3.2	High performance liquid chromatography (HPLC)	32
2.5.3.3	Liquid chromatography-mass spectrometric (LC-MS) methods	34
2.5.3.4	Gas chromatography-mass spectrometric (GC-MS) methods	35
2.5.4	Capillary electrophoretic methods	36
2.5.5	Mass spectrometric methods	38
2.5.6	Molecular imprinted methods	40
2.5.7	Optical methods utilizing UV-absorbance	41
2.6	Biosensor	42
2.6.1	Basic principle of biosensors	43
2.6.2	Classification of biosensors	44
2.6.2.1	Classification of biosensor on the basis of evolution	44
2.6.2.1.1	Ist generation biosensors	44
2.6.2.1.2	IInd generation biosensors	46
2.6.2.1.3	IIIRD generation biosensors	46
2.6.2.2	Classification of biosensors on the basis of transducing mechanism	47
2.6.2.2.1	Thermal detection biosensor	47
2.6.2.2.2	Optical detection biosensor	48

2.6.2.2.3	Piezoelectric biosensors	49
2.6.2.2.4	Electrochemical biosensors	49
2.6.2.2.4.1	Conductometric biosensors	50
2.6.2.2.4.2	Potentiometric biosensors	51
2.6.2.2.4.3	Amperometric biosensors	52
2.7	Creatinine biosensors	54
2.7.1	Electrochemical creatinine biosensors	55
2.7.1.1	Dissolved oxygen (DO) meter based creatinine biosensors	55
2.7.1.2	Amperometric creatinine biosensors	56
2.7.1.3	Nanomaterials based amperometric creatinine biosensors	62
2.7.1.3.1	Zinc oxide nanoparticles and carboxylated multiwalled carbon nanotubes based creatinine nanobiosensor	62
2.7.1.3.2	Iron oxide nanoparticles based creatinine nanobiosensor	63
2.7.1.4	Potentiometric creatinine biosensors	63
2.7.1.5	Conductometric creatinine biosensors	64
2.7.1.6	Enzymeless creatinine biosensors	65
2.7.1.6.1	Capacitive creatinine sensor based on a photografted molecularly imprinted polymer (MIP)	65
2.7.1.6.2	Voltammetric behaviour study of creatinine at phosphomolybdic-poly pyrrole film modified electrode	66
2.7.1.6.3	Novel biomedical sensors for flow injection potentiometric determination of creatinine in human serum	66
2.7.1.6.4	Enzymeless electrochemical sensor for the selective determination of creatinine	66
2.7.1.6.5	Potentiometric sensors based on dibenzo-30-crown-10 (DB30C10) with potassium tetrakis(p-chlorophenyl)borate	67
2.7.1.6.6	Potentiometric electronic tongue for clinical analysis of human urine	68
2.7.1.6.7	Chronoamperometric determination of urea and creatinine based on the organic nickel (II) complexes catalytic systems	68
2.7.1.6.8	Electrochemical sensor for detection of urea and creatinine based on molecularly imprinted polymers (MIP)	68
2.7.1.6.9	Enzymeless creatinine estimation using poly(3,4-ethylenedioxythiophene)- β -cyclodextrin	68
2.7.1.6.10	A novel structural specific creatinine sensing scheme for the determination of the urine creatinine	69
2.7.2	Creatinine immunosensors	69
2.7.3	Optical creatinine biosensors	71
CHAPTER-3	MATERIALS AND METHODS	79-93
3.1	Sources of chemicals and biochemicals	79
3.2	Instruments and equipments used	79

3.3	Assay of free enzymes	80
3.3.1	Assay of creatininase (CA)	80
3.3.2.	Assay of creatinase (CI)	80
3.3.3	Assay of sarcosine oxidase (SO)	81
3.3.4	Assay of mixture of free CA, CI and SO	81
3.4	Construction of enzyme electrode (Enzymes/c-MWCNT/PANI/Pt)	82
3.4.1	Dispersion of c-MWCNTs	82
3.4.2	Fabrication of PANI and c-MWCNT/PANI composite film on platinum (Pt) electrode	82
3.4.3	Co-immobilization of CA, CI and SO enzymes onto c-MWCNT/PANI composite film coated Pt electrode	84
3.4.4	Characterization of enzyme electrode (Enzymes/c-MWCNT/PANI/Pt)	84
3.4.4.1	Scanning electron microscopy	84
3.4.4.2	Fourier transform infrared spectroscopy	85
3.4.4.3	Electrochemical impedance spectroscopy	85
3.5	Construction and testing of amperometric creatinine biosensor	86
3.6	Optimization of working conditions of amperometric creatinine biosensor	88
3.6.1	Effect of pH	88
3.6.2	Effect of incubation temperature	88
3.6.3	Effect of incubation time	88
3.6.4	Effect of substrate (creatinine) concentration	88
3.6.5	Determination of K_m and I_{max}	88
3.7	Amperometric determination of creatinine in serum and urine	89
3.7.1	Collection of blood samples	89
3.7.2	Collection of urine samples	89
3.7.3	Assay of serum and urine creatinine with enzyme electrode (Enzymes/c-MWCNT/PANI/Pt)	90
3.7.4	Preparation of standard curve for creatinine with enzyme electrode (Enzymes/c-MWCNT/PANI/Pt)	90
3.8	Evaluation of analytical performance of creatinine biosensor employing enzyme electrode (Enzymes/c-MWCNT/PANI/Pt)	90
3.8.1	Detection limit	91
3.8.2	Percent recovery	91
3.8.3	Precision	91
3.8.4	Accuracy	91
3.8.5	Determination of serum creatinine by chemical spectrophotometric (Jaffe) method	92
3.9	Effect of interfering substances	92

	3.10 Reusability and storage stability of enzyme electrode (Enzymes/c-MWCNT/PANI/Pt)	93
CHAPTER-4	RESULTS AND DISCUSSION	94-129
	4.1 Construction of enzyme electrode (Enzymes/c-MWCNT/PANI/Pt)	94
	4.1.1 Fabrication of PANI and c-MWCNT/PANI composite film on platinum (Pt) electrode	94
	4.1.2 Co-immobilization of CA, CI and SO enzymes onto c-MWCNT/PANI composite film coated Pt electrode	99
	4.2 Characterization of enzyme electrode (Enzymes/c-MWCNT/PANI/Pt)	101
	4.2.1 Surface characterization of enzyme electrode by using SEM	102
	4.2.2 Fourier transforms infrared (FTIR) spectroscopy	102
	4.2.3 Electrochemical impedance spectroscopic (EIS) studies	103
	4.3 Construction of an amperometric creatinine biosensor	106
	4.4 Optimization of working conditions of creatinine biosensor	110
	4.4.1 Effect of pH	110
	4.4.2 Effect of incubation temperature	111
	4.4.3 Effect of incubation time	112
	4.4.4 Effect of substrate (creatinine) concentration	113
	4.5 Determination of serum and urine creatinine employing enzyme electrode (Enzymes/c-MWCNT/PANI/Pt)	117
	4.5.1 Serum creatinine value in apparently healthy and diseased persons	117
	4.5.2 Urine creatinine value in apparently healthy and diseased persons	118
	4.6 Evaluation of analytical performance of creatinine biosensor employing enzyme electrode (Enzymes/c-MWCNT/PANI/Pt)	118
	4.6.1 Linearity	119
	4.6.2 Detection limit	122
	4.6.3 Analytical recovery	122
	4.6.4 Precision	123
	4.6.5 Accuracy	123
	4.7 Effect of interfering substances	126
	4.7.1 Effect of various serum metabolites	126
	4.7.2 Effect of various metal ions	126
	4.8 Storage stability and reusability of enzyme electrode (Enzymes/c-MWCNT/PANI/Pt)	127
CHAPTER-5	SUMMARY	130-133
