

MEMORANDUM

I, hereby, declare that I have not previously submitted any of the work described in this thesis for any higher degree to this or any other university.

During the last four years, I have been mainly engaged in the study of some aspects of medicinal properties of plants and existence of any possible relation of them with uranium and boron contents of the plants. All the measurements and analyses presented in this work have been done by me. Few measurements and the final results have been carefully checked by my supervisor Prof. T.D. Goswami, Department of Physics, Gauhati University.
