

CHAPTER II	METHODS OF TRACE ANALYSIS	26-56
2.1.	Principles and methods of trace analysis	26
2.2.	Particle trace analysis ...	36
2.2.1.	Characteristics of track storing materials ...	36
2.3.	Track formation in solids ...	38
2.3.1.	Track formation mechanism ..	39
2.3.2.	Possible track formation mechanism; Ion explosion spike or primary ionisation model ...	40
2.3.3.	Restrictions in track formation	43
2.3.4.	Other track formation models	44
2.4.	Plastic detectors ...	44
2.5.	Observation of particle tracks ...	47
2.5.1.	Basics of track etching ...	47
2.5.2.	Etching conditions ...	49
2.5.3.	Different categories of tracks	49
2.6.	Environmental effects ...	50
2.7.	Track counting ...	51
CHAPTER III	EXPERIMENTAL PROCEDURE AND WORKING FORMULAE	57-74
3.1.	Collection of samples ...	57
3.2.	Preparation of samples ...	57
3.2.1.	Solid phase samples ...	58

	<u>Page No.</u>
3.2.2. Liquid phase samples ...	59
3.2.3. Detectors used ...	59
3.3. Irradiation packing ...	59
3.4. Irradiation of samples ...	60
3.5. Etching of irradiated samples ...	60
3.6. Observation of track densities ...	60
3.7. Determination of concentrations ...	61
3.7.1. Uranium ...	61
3.7.2. Boron ...	62
3.8. Derivation of the working formula ...	63
3.8.1. Uranium estimation ...	63
3.8.2. Boron estimation ...	66
3.8.3. Liquid phase materials ...	67
3.9. Errors of PTA ...	68
3.9.1. Experimental error ...	68
3.9.2. Statistical error ...	70
 CHAPTER IV. MEDICINAL PLANTS SELECTED FOR THE STUDY	 75-93
4.1. Introduction ...	75
4.2. Description of the plants and their medicinal properties ...	 75
 CHAPTER V. RESULTS OF URANIUM ESTIMATION	 94-120
5.1. Distribution of tracks ...	94
5.2. Experimental data ...	94

	<u>Page No.</u>
5.3. Graphical representations of the data	99
5.4. Soil samples ...	100
5.5. Variation of uranium contents of various parts of a plant ...	101
5.6. Uranium contents of various groups of samples with identical medicinal properties	108
5.7. Possible correlation between uranium contents and medicinal properties of plants ...	110
5.8. Test for significance of difference in various groups of samples ...	113
5.9. Significance of uranium contents of some individual samples ...	115
 CHAPTER VI RESULTS OF BORON ESTIMATION	 121-137
6.1. Distribution of alpha-particle tracks in CN detectors ...	121
6.2. Experimental data ...	121
6.3. Graphical representations of data ..	125
6.4. Boron contents of soil ...	126
6.5. Results of t-test for significance of variations of boron contents in different parts of plants ...	127
6.6. Boron contents of various groups of samples with identical medicinal properties	133

CHAPTER VII	CONCLUDING REMARKS	138-143
7.1.	Comparison of the trace contents of uranium and boron in the plants ..	138
7.2.	Variations of uranium and boron contents with medicinal properties of the plants	139
7.3.	Future perspective ..	142
APPENDICES	...	144-151
Appendix I -	Glossary of medicinal terms used in the text ..	144
Appendix II-	Consistency of two means: t-test	149
Appendix III-	Calculation of mean uranium and boron contents of various groups of samples ..	150
Appendix IV-	Test for difference of two population means ..	151
