ACKNOWLEDGEMENTS

First and foremost, I offer my sincerest gratitude to my guide, Prof. Dr. Marian Pinheiro, Dean, Faculty of Law; Chairman, Board of Studies in Law, Goa University and Principal, V. M. Salgaocar College of Law, Panaji, Goa, who has supported me throughout my research, with his patience and knowledge whilst allowing me the freedom to work independently. I attribute this thesis to his encouragement and academic competence. One simply could not wish for a better or friendlier supervisor.

I am also highly indebted to Prof. Dr. T. R. Subramanya, University Law College, Bangalore; Prof. Dr. K. R. Aithal, Karnatak University, Dharwad; Dr. S. V. Joga Rao, Advocate, Solicitor and Healthcare Consultant and Dr. Carmo D’Souza, Associate Professor, V. M. Salgaocar College of Law, Goa, for their useful interaction and guidance during this research.

None of this work would have borne fruit if not for the co-operation extended by the staff of the Goa State Pollution Control Board, especially Natalia Dias, Legal Officer, as also by various Doctors, Nurses and Subordinate staff of the healthcare establishments in the State of Goa, which I gratefully acknowledge.
I am grateful to my brother, Roy da Silva, Principal, St. Stephen’s School, Togan (Chandigarh), for having taken the laborious task of reading the entire thesis and making necessary corrections and alterations.

This research would never have been complete without the facilities of the libraries of the United States Information Service (USIS) and the British Council, both in Mumbai; the National Law School of India University, Bangalore and the Indian Law Institute, New Delhi, being made available to me, which I gratefully acknowledge.

Collective and individual acknowledgements are owed to the Principal and colleagues at my institution, G. R. Kare College of Law, Margao-Goa, especially Anand R. Salve, Librarian, who besides extending all the assistance I required in Library, has been a constant companion throughout the documentation.

Special mention needs to be made of the co-operation extended by my former colleagues at the Directorate of Health Services, Government of Goa and at the two District Hospitals, to enable me to gather the requisite empirical data for this study.

Words fail to express my appreciation to my wife, Sandra who not only has taken the load off my shoulders due to her love and persistent
confidence in me, but who has also contributed to give shape to this study. My dearest son, **Jaime Carl** needs special mention for being supportive of my work in his own little way.

No words of gratitude will be complete without thanking my dear mother, who has been supportive of me and without whom none of my endeavours in Education, particularly Higher Education would have materialised.

Finally, I would like to thank my close relatives and everybody who was important to the successful realization of this thesis, as well as regretting that I could not mention personally every single individual who has in some way contributed towards this research study.

**Saba Vincent Mesquita Da Silva**
