1. Hugli District – the study region.

2. Location of the study region in the perspective of India and West Bengal.

3. Administrative Units of the Hugli District.

4. Relief map of the study region.

5. Relative Relief

6. Topographical Characteristics

7. Residual map showing the relation between Relative relief and Area under jute (1993-1994)

11. Drainage map of the District.

12. Drainage density of the study region.

15. Relationship between drainage density and area under jute (1997-98)

16. Residual map of drainage density and area under jute (1997-98)

17. Yearly fluctuations of temperature in the study region

18. Annual distribution of rainfall in the study region (1995-96)

19. Distribution of normal annual rainfall of the study region.

20. Annual distribution of rainfall and temperature in the study region (1995-96)

22. Ombrothermic diagram with crop calendar.

23. Soil texture of the District.

24. Total fertility of the District.

27. Distribution of $P_2O_5$

28. Total fertility of the region.

29. Distribution of soil pH.

30. Fertility zoning of the District.

31. Soil characteristics of the District (Block wise).

32. Ground water conditions of the study region.

35. General occupational structure of the Hugli District.

36. Block wise occupational structure of the District.

38. Cropping intensity of the important crops for different years.

41. Crop diversification of Aman Paddy.

42. Crop diversification of Boro Paddy.

43. Crop diversification of Wheat.
44. Crop diversification of Potato.
45. Crop diversification of Jute.
46. Index of concentration in the Hugli District.
47. Yield-rate of Aman Paddy (1990-91)
49. Yield-rate of Boro Paddy (1990-91)
50. Yield-rate of Boro Paddy (1997-98)
51. Comparative position of yield-rate of different crops
52. Relationship between year and production of Aman paddy
53. Relationship between year and yield-rate of Aman paddy
54. Relationship between year and production of Boro paddy
55. Relationship between year and yield-rate of Boro paddy.
56. Productivity index of different crops in the Hugli District.
57. Yield-rate of jute (District wise, 1993-94)
58. Yield-rate of jute (District wise 1997-1998)
59. Comparative production of jute for the District, State and the Country.
61. Temperature and rainfall conditions.
64. Area of jute for the year 1990-91, 1994-95 and 1997-98.
65. Residual map of area and production of jute (1990-91).
68. Yield-rate of jute (1990-91).
71. Irrigated area under different sources in the study region.
72. Irrigated area under jute.
73. Irrigated and non-irrigated under jute.
74. Correlation between irrigated area under jute and production of jute for the year 1997-98.
75. Intensity of irrigation (1986-87).
77. Change in intensity in percentage (1998).
79. Absolute increase of irrigation in percentage.
80. Expenses of irrigation of different crops.
81. Residual map between jute irrigated area and production of jute (1997-98).
82. Grade wise production of jute in the study region.
83. Quality wise marks distribution of jute.
84. Distribution of population of Pursurah Block.
85. Relief characteristics of Pursurah Block.
86. Distribution of soil types in the case study region.
87. Fertility zones of the case study region.
88. Land potential characteristics of the study region.
89. Climatic conditions of the case study Block in relation to jute cultivation.
90. Drainage density of the Pursurah Block.
91. Ground water condition during the season of jute cultivation.
92. Land use pattern of the Pursurah Block.
93. Different Anchals of the case study area.
94. Comparative pattern of the lands under major crops.
95. Production of major crops in the Pursurah Block.

96. Percentage wise distribution of jute lands in the Pursurah Block (Anchal wise).

97. Distribution of jute area in the case study region.

98. Percentage wise distribution of jute production in the Pursurah Block (Anchal wise).

100. Distribution of the production of jute in the case study region.

101. Relationship between area and production of jute in the Pursurah Block.

102. Relationship between area production of the Pursurah Block.

103. Correlation between area and yield-rate of jute in the Pursurah Block.

104. Relationship between area and yield-rate of jute in the Pursurah Block.

105. Crop diversification in the Pursurah Block.

106. Fertility zones of the case study area.

107. Zones of concentration of jute area in the Pursurah Block.
108. Yield-rate zones of the Pursurah Block.

109. Residual map of area and yield-rate of Bhangamora, Kelepara, Dehibatpur, Pursurah – 1, Pursurah – 2, Srirampur, Chilladangi, and Shyampur mouza of the Pursurah Block.

110. Cost of production of jute in the Pursurah Block.

111. Grade wise production of jute in the Pursurah Block.

112. Schematic model

113. Consumption of raw jute by mills and domestic.

114. Monthly arrival of raw jute (in %) in the primary, secondary and terminal markets.

115. Quality wise price of jute.

117. Minimum and maximum support price of jute by the Government.

118. Percentage of jute sold at different tiers of market.
