ACKNOWLEDGEMENT

It gives me immense pleasure to present this thesis based on the problem suggested to me by Dr. D. N. Baishya, M.Sc., Ph. D., Professor and formerly Head of the Department of Botany, Gauhati University. The experimental part of this work was carried out under his supervision in the laboratory of the Botany Department in the Gauhati University. This work is original and had not been previously submitted at this or any other University or Research Institute.

At the outset, I would like express my sincere gratitude to my guide Dr. D. N. Baishya for his constant guidance and help, without which the completion of this work would have been impossible.

I am indebted to Dr. C. L. Baishya, M. Sc., Ph.D., Professor and Head of the Department of Botany, Gauhati University, for providing the necessary facilities at the period and Dr. K.N.Borah for his generous help during the course of this investigation.

I am grateful to all my teachers of the Botany Department, Gauhati University, for their helpful advice and encouragement.
In conclusion, I would like to express my sincere appreciation to my mother, sister, brothers, uncle and friends for their continuous encouragement in different stages of work.
