Acknowledgements

In the course of this study I have accumulated many debts of gratitude. First of all, I acknowledge my profound indebtedness to my supervisor Prof. Pinaki Chakraborti, for his valuable guidelines and inspiration. There are simply no words by which I can express my gratitude to him. Without his encouragement I would not have been able to complete my research work. His valuable advice had helped me throughout my work. He enriched my knowledge with resourceful insights. He had also improved my writing skills along with the thought process and developed skills to formulate an economic problem by mathematical tools. It is a great honour for me to get this opportunity to express my gratitude towards him. But his contribution is much more than the words could express.

I owe my special gratitude to Dr. Pravat Kumar Kuri, Department of Economics, The University of Burdwan, for the encouragement he has provided throughout the entire research work. I am also indebted to all my teachers in the Economics Department of The University of Burdwan, for their help and support throughout the course of my work.

The author is also indebted to his parents for their inspiration, encouragement and blessings which have been with me in facing all the difficulties bravely. I also express my gratitude towards my brother Dipankar and other family members for their encouragement throughout my work.
The author is also indebted to his fellow research scholars and staffs of the department for the support and co-operation they have provided during the course of my research works. Any theoretical study ultimately depends on the access to the journals and relevant research notes. For this study, I have consulted many libraries e.g. Central library, The University of Burdwan, Indian Statistical Institute Library, Kolkata and Centre for Studies in Social Sciences, Kolkata. I express my sincere thanks to the authorities and staffs of all these institutions for their active help and co-operation.

Last but not the least, I am grateful to Bidyut Kumar Ghosh, Sukanya Nandy, Moumita Chattapadhyay of the department and all of my friends for the cheerful spirit they have provided me whenever needed. I express my sincere thanks to Krishnendu Bhattachariya and Samiran Karmakar for their mathematical help they have provided whenever required.

I am also thankful to Dhar Brothers, Kolkata for printing and binding work of the dissertation. However, any error that may remain in this dissertation is the sole responsibility of mine.
