Abstract VII

1 Introduction 1
   1.1 Background ........................................... 1
   1.2 Rationale for study methods .......................... 3

2 Detailed literature review 6
   2.1 Summary of ambient air quality status in India ........ 6
   2.2 Summary of air pollution and health effects studies in India .... 9
   2.3 Summary of results from time-series analyses studies in Asia ... 17
   2.4 Rationale for study and study methods based on available literature . . . . . 30

3 Aims and Objectives 32
   3.1 Aim ...................................................... 32
   3.2 Specific objectives ...................................... 32

4 Methods 34
   4.1 Overall framework of data collection ..................... 34
      4.1.1 Air pollution data .................................. 36
      4.1.2 Mortality and morbidity data ...................... 37
      4.1.3 Meteorological data ................................ 38
4.2 Poisson Regression Models for PM$_{10}$, All-natural cause mortality and Cardio-respiratory Morbidity (using simple city level averages for PM$_{10}$)........... 38
4.2.1 Construction of city average PM$_{10}$ exposures ......................... 38
4.2.2 Core model specification ................................................. 39
4.2.3 Sensitivity Analysis .................................................... 39
4.3 Development of alternative models for PM$_{10}$ exposures (including use of single monitor, multiple monitor and zonal models) for application in GAMs 40
4.3.1 Single Monitor models .................................................. 44
4.3.2 Multiple monitor models ................................................ 45
4.3.3 Zonal Model .............................................................. 47
4.4 Development of auto-regressive Poisson regression models ............... 49
4.4.1 Model Specification ...................................................... 50
4.4.2 Estimation ............................................................... 52

5 Results 58
5.1 General descriptives for the PM$_{10}$, mortality and morbidity data sets ... 58
5.2 Results from Generalized Additive Models using daily city level averages for PM$_{10}$ ......................................................... 58
5.3 Sensitivity analysis .......................................................... 60
5.3.1 Exposure Lag ............................................................. 61
5.3.2 Missing structure in k-days cumulative average PM$_{10}$ exposure ... 61
5.3.3 Cumulative average over 2-7 days ...................................... 62
5.3.4 Confounder degrees of freedom ........................................ 63
5.3.5 Age and sex specific analysis .......................................... 64
5.3.6 Dose-Response .......................................................... 65
5.4 Results from alternative exposure models (single, multiple and zonal exposure models) .......................................................... 67
5.4.1 Single monitor models .................................................... 67
5.4.2 Multiple monitor models ................................................ 67
5.4.3 Zonally disaggregated exposure series model ....................... 68
5.5 Autoregressive Poisson regression model with missing covariates ........ 68
5.6 Validation of 'alternative exposure models’ and the 'auto regressive Poisson regression model’ ......................................................... 69
6 Discussion and Conclusions

6.1 Discussion

6.1.1 Exposure Data

6.1.2 Health Data

6.1.3 Modeling Methods

6.1.4 Comparison of effects estimates from this study with results from previous studies

6.1.5 Limitations of study

6.2 Conclusions
