List of Tables

2.1 Air pollution and health research in India ................................... 12
2.2 Percent excess risk of All-Natural-Cause Mortality associated with a 10-μg/m³ increase in PM concentration among selected cities in Asia, Europe and North America ......................................................... 18
2.3 Air pollution and health research in Asia .................................... 22
4.1 Correlation matrix of between monitor correlation ....................... 42
5.1 Summary statistics for daily cause specific mortality, mortality due to cardiovascular and respiratory causes, hospital admissions due to cardiovascular and respiratory illness, PM10 and meteorological parameters ................. 60
5.2 Core model for all-natural cause mortality, mortality due to cardiovascular and respiratory causes and hospital admissions due to cardiovascular and respiratory ............................................................. 60
5.3 Comparison of relative risk (RR) between mortality due to cardiovascular and respiratory disease and all-natural cause mortality for different model configuration ..................................................... 62
5.4 Comparison of RR of hospital admission due to cardiovascular and respiratory disease across different model configurations ..................... 64
5.5 Comparison of relative risk (RR) for all-natural cause mortality using alternative exposure metrics from single, multiple and zonal models ...... 68
5.6 Estimates and Standard Errors of selected parameters of the autoregressive Poisson regression model fitted on Chennai data set ....................... 69
5.7 Simulation results for low correlation setting (γ = 0.20) ................... 75
5.8 Simulation results for moderate correlation settings (γ = 0.50) ............ 75
5.9 Simulation results for high correlation settings (γ = 0.85) .................. 76
