

CONTENTS

<i>Chapters</i>	<i>Page no.</i>
Chapter I:	
Introduction	
1.1 A History of development of the subject	01
1.2 Review of the relevant literature	27
1.3 Basic Equations	32
1.4 Outline of the thesis	37
Chapter II:	
The combined effects of electric and magnetic fields on Unsteady plane couette flow through a porous medium in presence of variable suction at stationary plate.	
2.1 Introduction	42
2.2 Mathematical Formulation	43
2.3 Method of solution	46
2.4 Coefficient of Skin Friction	49
2.5 Rate of Heat Transfer	50
2.6 Results and Discussion	51
2.7 Conclusion	53
Appendix	66
Chapter III:	
MHD oscillatory free convective flow past a vertical plate in slip-flow regime with variable suction and periodic plate temperature	
3.1 Introduction	75
3.2 Mathematical Formulation	76
3.3 Solution of the problem	78
3.4 Coefficient of Skin-friction	83
3.5 Coefficient of Heat Transfer	84
3.6 Results and Discussion	85
Appendix	97

Chapter IV:

MHD oscillatory free and forced convective flow past a vertical plate in slip-flow regime with variable suction and periodic plate temperature

4.1	Introduction	105
4.2	Mathematical Formulation	106
4.3	Solution of the problem	108
4.4	Coefficient of Skin-friction	113
4.5	Coefficient of Heat Transfer	114
4.6	Results and Discussion	114
	Appendix	126

Chapter V:

Steady MHD poiseuille flow and heat transfer through a channel with flat porous walls in presence of constant pressure gradient and heat source.

5.1	Introduction	133
5.2	Mathematical Formulation	134
5.3	Solution of the problem	138
5.4	Coefficient of Skin-friction	138
5.5	Rate of Heat Transfer	138
5.6	Results and Discussion	139
5.7	Conclusions	141
	Appendix	150

Chapter VI:

Steady MHD free convective couette flow and mass transfer between two vertical porous plates

6.1	Introduction	152
6.2	Mathematical Formulation	153
6.3	Solution of the problem	158
6.4	Coefficient of Skin-friction	160
6.5	Rate of Heat Transfer	161

6.6	Results and Discussion	161
6.7	Conclusions	164
	Appendix	178
Chapter VII:		
MHD free convective poiseuille flow and mass transfer through a porous medium bounded by two infinite vertical porous plates.		
7.1	Introduction	188
7.2	Mathematical Formulation	189
7.3	Solution of the problem	192
7.4	Coefficient of Skin-friction	194
7.5	Rate of Heat Transfer	194
7.6	Results and Discussion	194
	Appendix	208
Chapter VIII:		
Effect of thermal diffusion and magnetic field on unsteady free convective flow with mass transfer through a porous medium in presence of a heat source.		
8.1	Introduction	210
8.2	Mathematical Formulation	211
8.3	Method of solution	214
8.4	Coefficient of Skin-friction	223
8.5	Coefficient of Heat Transfer	223
8.6	Results and Discussion	224
8.7	Conclusions	226
	Appendix	236
Chapter IX:		
Laminar boundary layers in MHD oscillatory flow past a vertical porous plate with constant suction in rotating system.		
9.1	Introduction	258

9.2	Mathematical Formulation	259
9.3	Solution of the problem	261
9.4	Velocity and temperature field	263
9.5	Coefficient of Skin-friction	264
9.6	Rate of Heat Transfer	265
9.7	Results and Discussion	265
9.8	Conclusions	267
	Appendix	275

Chapter X:

Thermal diffusion effect on a three-dimensional MHD free convection with mass transfer flow from a porous vertical plate.

10.1	Introduction	277
10.2	Basic Equations	278
10.3	Method of solution	283
10.4	Cross flow solution	286
10.5	Solution for first order flow, concentration and Temperature field	288
10.6	Skin friction at the plate	292
10.7	Co-efficient of rate of heat transfer	292
10.8	Co-efficient of mass transfer	293
10.9	Current density	293
10.10	Results and discussion	294
10.11	Conclusions	296
