ACKNOWLEDGEMENT

The success of any project is never limited to the individual who is undertaking the work. Most often, it is the collective effort of the people that reflect in the success. It is impossible to thank everybody separately who are responsible for this day as it is dependent on several yesterdays. However, I take this opportunity to express my gratitude and thank some of the personalities involved with me during the completion of this thesis.

First and foremost, I would like to express my sense of gratitude to my Research Guide Dr. K. Lakshmi Devi for her guidance, encouragement, the freedom of work and parental care she provided throughout my research work.

I am deeply indebted to Dr. Madhusudhana Reddy, Microbiology department, Nizam College, Hyderabad for his inspiring guidance. His sustained interest in my work and perceptive comments have contributed immensely to the content of research work presented here.

I sincerely thank to Sri. T. Sreenivasa Babu, Secretary and Correspondent and Dr. C. Anil Kumar, Principal of our college for providing lab facilities for my research work. I am thankful to my colleagues Mrs. G. V. Padmavathi, Mrs. C. Srujana, Mrs. P. Usha Rani and Ms. B. Narmada for their constant help, encouragement and moral support in carrying out this project.

I express my sincere thanks to Mr. K. L. Koteswara Rao for helping me regarding typing of the thesis.

I express my heartfelt gratitude to my mother and husband for their guidance and cooperation during the hole of my education and research, without whom I would not have been a successful person. Last but not the least I thank all my family members for their kind support throughout my life.

(V. MADHAVI)
