ACKNOWLEDGMENT

This research was carried out under the direction of Dr. S.K. Sarmah, Reader, Department of Environmental Science, at Gauhati University. The author is grateful to Dr. Sarmah for his assistance and many suggestions in all phases of the work including the writing of the thesis.

The author expresses his gratitude to Prof. B. Chaudhuri, Head of the Physics Department and In-Charge of the Computer Centre at Gauhati University (since retired) for his help and encouragement in carrying out the work. The assistance of Sri S. Maheswari, the Programmer and other members of the Computer Centre in computation of data is also appreciated.

The author expresses his indebtedness to Prof. B.K. Barua, Head of the Department of Physics, Cotton College, for his many helps, without which the preparation of this thesis would not have been possible.

The author is also thankful to his friend Dr. H. Chaudhury, Department of Statistics, Gauhati University, and his colleagues in the Cotton College, for their help and encouragement.

Appreciation is also extended to U.S. Coast and Geodetic Surveys for supplying Earthquake data Reports and Seismogram used in this study.
