ACKNOWLEDGEMENTS

I take this opportunity to express my heartfelt gratitude to Dr. K.P. Sarma, Reader, Department of Geological Sciences, Gauhati University for giving the opportunity to work under his noble guidance. His contributions to my life is everlasting and cannot be quantified and expressed in any way.

I also express my sincere gratitude and thanks to Prof. P.K. Das, Head, Department of Geological Sciences, Gauhati University for providing the necessary laboratorial facilities.

I recall with gratitude the advice, suggestions, encouragement and affection that I received from Ex. Prof. (Dr.) Md. Maswood, Department of Geological Sciences, Gauhati University. His encouragements have been a motivating factor in taking up this task.

I take this privilege to offer my heartiest thanks to Dr. Shyamal Sengupta, Geologist, GSI for giving me a duplicate of the toposheet of my study area. Due acknowledgement and thanks are to the Head of the department, USIC and Mr. D. Das and Mr. S. Bardoloi for carrying out XRF analysis of the rock types at their laboratory at Gauhati University. Thanks are also due to Mr. J.N. Sarma, for his help relating to a few chemical analyses.

Special thanks are also due to my guide Dr. K.P. Sarma and his wife Mrs. M. Devi, who despite all the untimely disturbances at their residence never let the motivation for work in me go down. I should also recall and acknowledge the help received from their youngest son, Indrajit Sarma (Jinku), in drawing the computer maps.

The discussions made with Ms. Jonali Medhi, former Research Scholar of the Department of Geological Sciences, Mr. Tapas Goswami, Lecturer J.B. College, Mr. Tapan Kumar Bharali, Ms. Swapnali Dutta, Research Scholars, Department of Geological Sciences, Gauhati University and Ms. Neva Devi, ex-student of the department were valuable and helpful in understanding the arduous situations in various stages of work. Special thanks are also due to Mr. J.J. Laskar, Research Scholar in the department for his help in taking a few microphotographs.

It is my pleasure to recall the constant support and helps that I received from my fiancé Mr. Hirshikesh Baruah, Lecturer in Geology, Arya Vidya Peeth College, Guwahati in the process of completion of this thesis. Without his persuasion, aspirations and untiring efforts in every stage of work, this thesis would not have come to the present configuration. The very idea to work for a doctoral degree was a result of his cherished dream. I should also take this opportunity to acknowledge the keen interests shown by his parents and sister in the completion of this work.

Last but the most important is the love, affection, support, criticism and interest of my parents, sisters, particularly Gopa and Lopa and our dear Bahadur, and the critical viewpoints of my brother-in-laws at this juncture of my life made my journey to the goal easier. Besides these, special thanks are also due to Mr. Anish Biswas and Mr. Abhisekh Choudhury for their help in getting the colour xerox done at Calcutta.

Department of Geological Sciences,
Gauhati University, Guwahati - 781 014, India
