ACKNOWLEDGEMENT

This thesis is based on the problem suggested to me by Dr. D.N. Baishya, M.Sc., Ph.D., Reader in Botany, Gauhati University, and the experimental part of this work was carried out under his supervision in the laboratory of the Botany Department in the Gauhati University. This work is original and had not been previously submitted at this or any other University or Research Institute.

At the outset, I should express my sincere gratitude to my guide and supervisor Dr. D.N. Baishya for his constant guidance and help, without which the completion of this work would have been impossible.

I wish to thank Dr. L.C. Kagti, M.Sc., Ph.D., Professor and Head of the Department of Botany, Gauhati University, for kindly providing the necessary facilities in the department and rendering all help and encouragement during the course of this investigation.

I remember with gratitude late Dr. H.K. Baruah, M.Sc. (Cal), Ph.D. (Cantab) who was the Professor and Head of the Department of Botany during the time of my engagement in research work and who later became the Vice-Chancellor of Gauhati University, had the pleasure to encourage and inspire me in carrying on the investigations in this field of research.
A word of thanks is due to my father Dr. K.C. Das, M.A., Ph.D., Retd. Professor and Head of the Department of Philosophy, Gauhati University who is always an inspiration to me.

Last but not the least, I express my deepest appreciation of the help and co-operation received from my husband Sri R. C. Thakuria, M.A., Professor, Cotton College, Gauhati, throughout the work.

Arpana Thakuria

Lecturer in Botany,
Pragjyotish College, Gauhati
