LIST OF TABLES

Table II.1. Size of family (in %)  
Table II.2a. Composition of family (in %)  
Table II.2b. Combined family types (in %)  
Table II.3. Sex distribution (in %)  
Table II.4. Distribution by age and sex (in %)  
Table II.5. Distribution by age, sex and sex-ratio in pre-fertile, fertile and post-fertile age groups  
Table II.6a. Distribution by age, sex and civil condition: Khasi  
Table II.6b. Distribution by age, sex and civil condition: Garo  
Table II.6c. Distribution by age, sex and civil condition: Mizo  
Table II.7a. Educational status of the spouses: Khasi  
Table II.7b. Educational status of the spouses: Garo  
Table II.7c. Educational status of the spouses: Mizo  
Table II.7d. Educational status of the spouses combinedly (in %)  
Table II.8a. Occupation of husband (in %)  
Table II.8b. Occupation of wife (in %)  
Table III.1a. Distribution of causes of death period wise (in years) and during the decade, 1980-1989: Khasi  
Table III.1b. Distribution of causes of death period wise (in years) and during the decade, 1980-1989: Garo
Table III.1c. Distribution of causes of death period wise (in years) and during the decade, 1980-1989; Mizo

Table III.2. Distribution of causes of death period wise (in years) and during the decade (1980-1989); inter-population variation.

Table III.3a. Distribution of infant/early childhood (1-4 years) deaths by leading causes, period wise (in years) and during the decade, 1980-1989; Khasi

Table III.3b. Distribution of infant/early childhood (1-4 years) deaths by leading causes, period wise (in years) and during the decade, 1980-1989; Garo

Table III.3c. Distribution of infant/early childhood (1-4 years) deaths by leading causes, period wise (in years) and during the decade, 1980-1989; Mizo

Table III.4. Distribution of infant/early childhood (1-4 years) deaths by leading causes, period wise (in years) and during the decade (1930-1989); inter-population variation.

Table III.5. Endogenous and exogenous causes of infant death (in %)

Table IV.1. Childless mothers (in %)

Table IV.2. Infant mortality (in %)

Table IV.3. Child mortality (in %)

Table IV.4. Sexwise distribution of mortality before the reproductive age (0-14 years)

Table IV.5. Pregnancy wastage (in %)

Table IV.6. Perinatal mortality (in %)
Table IV.7. Record of conception, pregnancy wastage and fertility
Table V.1. Biosocial proximates among the three populations (in %)
Table V.2. Infant, toddler and juvenile mortality among the Khasi, Garo and Mizo population groups
Table V.3. Binomial test of equality of proportion on infant, toddler and juvenile mortality
Table V.4. Biosocial proximates among the three populations: experimental and control group separately
Table V.5a. Binomial test of equality of proportion in relation to biosocial proximates
Table V.5b. X²-test in relation to biosocial proximates
Table V.5c. t-test in relation to biosocial proximates
Table V.5d. Mean and standard deviation value of mother's age at marriage, mother's age at first child birth and size of family
Table V.6a. Childhood deaths according to three leading causes
Table V.6b. Binomial test of equality of proportion in relation to causes of child death and total child deaths.
Table V.7. Biosocial proximates in three populations
Table VI.1. Decadal variation on infant and child mortality among the urban Khasi (in %)
Table VI.2. Infant and child mortality among the different population groups of Shillong (in %)
Table VI.3. Infant and child mortality among the different population groups of Meghalaya (in %)  

Table VI.4. Infant and child mortality among the different population groups of North-East India (in %)  

Table VI.5a. Distribution of child deaths in various categories of diseases among the Koch and Brahmin of Kamrup, Assam.  

Table VI.5b. Distribution of infant/early childhood (1-4 years) deaths by leading causes among the Khasi, Garo and Mizo populations of Shillong.
