ACKNOWLEDGEMENTS

At the very onset I would like to thank Prof. R. N. Sharan who is not only my supervisor and teacher but also a friend and of late, a nice colleague. I thank him for inducting me in his unit and giving me the opportunity to be associated with him. The encouragement and support given by him are really memorable. His excellent scientific thoughts and ideas, helpfulness and kind-heartedness have always made me very comfortable to work with him. His faith in me has always been the greatest source of encouragement. Even the best possible words might be inadequate to express my gratitude to him. I am sure that our association will go a long way in fulfilling the scientific aspirations in the years to come.

I am very grateful to my parents for their unending blessings and good wishes, which enabled me to complete my course. Thanks also goes to my sister and brothers who shared most of the works at home thereby making me fully available to complete my work.

A very special thanks goes to my wife Rima for her constant faith in my abilities. As far as I remember since I met her, luck seemed to have smiled at me. Her understanding, help and thorough support has given me immense sense of pleasure for the last 5 to 6 years and I am sure this will go on and on.

Words of encouragement, prayers and good wishes go a long way in leading to the accomplishment of any work and my in-laws have never lack those words for me in true sense. A sincere thanks goes to them.

I would like to express my gratitude to my colleagues in the department, especially Prof. Rai, Prof. Sharma, Dr. Alam, Dr. Syiem and Dr. Singh who had taught me. Their blessings and encouragement will always be remembered.

Thanks also go to my lab. mates-Pathaw, Chaitali, Meriyani, Renie and Yasmine for their help and cooperation in making the laboratory atmosphere healthy.

Co-researchers-Tham, James, Garret and others are being remembered for their help in one way or the other. Having fun loving people around makes research seemingly easier.

Former research scholars-Dr. Oren, Dr. Imliwati, Dr. Chowphi, Dr. Herbert, Dr. Omarlin and others also deserve thanks for their initial help and suggestions. The good moments spent with them will be cherished forever.

A word of thanks to kong Judy and other laboratory attendants/technicians for their help during my experiments.

I do believe that blessings and good wishes from different people and from different corners are unseen factors that go a long way in shaping and guiding one's life. Naming all of them, however, will not be possible. A big ‘Thank You’ to all my well-wishers.
I am grateful to Dr. F. H. A. Schneeweiss, Juelich, GmbH, Germany, for his valuable help and suggestions.

Thanks are due to the Department of Science and Technology (DST) for the initial financial support, which I received as JRF in a project under Sharan sir.

I would also like to acknowledge the financial support given by CSIR in the form of JRF-NET, which was of utmost help to me for quite sometime in pursuing my research.

Last, but definitely, never the least, a special thanks to 'North-Eastern Hill University' (NEHU), Shillong for everything that it has given to me. I will ever be grateful to this university and will try to give my best to it. I will also try to do everything I can so that its name and fame are always held high with great respect, now and in the years to come.
