Chapter 1	
Introduction and Review	1
1.1 Introduction	1
1.2 A brief survey of polymer-supported strategy	3
1.2.1 Polymer metal complexes	4
1.2.2 Formation and stability of polymer chelates	8
1.2.3 Polymer effect in catalytic rate	10
1.2.4 Polymer-supported chromium(VI) compounds	11
1.2.5 Polymer-supported permanganate reagents	11
1.3 Ion-exchange resins	12
1.3.1 Historical developments	13
1.3.2 Criteria for a compound to act as a selective ion-exchangers	13
1.3.3 Theoretical aspects	14
1.3.4 Nature of polymeric matrices	15
1.3.5 Characterisation of chelating ion-exchange resins and their metal complexes	16
1.4 Dioxygen complexes	19
1.4.1 Synthetic dioxygen carriers	19
References	21
 Chapter 2	
Scope of the Work	25
2.1 Introduction	25
2.2 Brief survey of the present work	26
References	29
 Chapter 3	
Materials and Methods	30
3.1 Reagents	30
3.2 Spectral methods	30
3.3 Experimental	31
3.3.1 Polymer supports	31
3.4 Polymer supports and metallated species—Abbreviations used	34

Chapter 4		
Covalently Linked 4-Coordinate Copper(II) Complexes on Polymer Supports		42
4.1	Introduction	42
4.2	Mono-Schiff-base complexes of copper(II) bearing anionic function— Schiff-bases with varying C-substituents	43
4.2.1	Experimental	44
4.2.2	Results and discussion	45
4.3	Polymer-supported asymmetric Bis SB complexes of copper(II)	53
4.3.1	Experimental	54
4.3.2	Results and discussion	54
4.4	Generating Bi copper(II) complexes of SB derived from diamines	63
4.4.1	Experimental	64
4.4.2	Results and discussion	65
	References	70
Chapter 5		
Coordinatively Bound Five-Coordinate Schiff-base Complexes on Polymer Supports—Cu(II) Systems		72
5.1	Introduction	72
5.2	Copper(II) salicylaldehyde SB complexes on polymer supports (D and C)	76
5.2.1	Experimental	77
5.2.2	Results and discussion	80
5.3	2,4-Dihydroxy benzaldehyde SB copper complex on C	99
5.3.1	Experimental	99
5.3.2	Results and discussion	100
5.4	Copper(II) SB complexes on polymer supports (D and C)	106
5.4.1	Experimental	106
5.4.2	Results and discussion	108
5.5	Cu(II) SB complex on ethylene diamine bound polymer support (E)	115
5.5.1	Experimental	115
5.5.2	Results and discussion	116
	References	120
Chapter 6		
Coordinatively-bound Six-coordinate Schiff-base Complex on Polymer Supports—Copper(II) system		122
6.1	Introduction	122
6.2	Bis-bidentate Schiff-base complexes of copper(II)	123
6.2.1	Experimental	123
6.2.2	Results and discussion	124
6.3	Six-coordinate complexes on polymer support: 2-hydroxy naphthalene-1-carbaldehyde SBs	130
6.3.1	Experimental	130
6.3.2	Results and discussion	132
	References	137

Chapter 7		
Covalently Linked Five-Coordinate Schiff-base Complexes on Polymer Supports—VO(IV) Systems		138
7.1	Introduction	138
7.2	Mono-Schiff-base complexes of oxovanadium (IV) bearing anionic functions	141
	7.2.1 Experimental	142
	7.2.2 Results and discussion	142
7.3	Mono-Schiff-base complexes of oxovanadium(IV) bearing anionic functions	146
	7.3.1 Experimental	147
	7.3.2 Results and discussion	147
7.4	Polymer supported asymmetric Bis-SB complexes of oxovanadium	149
	7.4.1 Experimental	150
	7.4.2 Results and discussion	151
7.5	Bivanadyl complexes of SBs derived from diamines	155
	7.5.1 Experimental	156
	7.5.2 Results and discussion	156
7.6	Bis-bidentate Schiff-base and other five-coordinated complexes of VO(IV)	160
	7.6.1 Experimental	161
	7.6.2 Results and discussion	162
	References	172
Chapter 8		
Structural and Electronic Modification of Co(II) Complexes by Polymer Appending—Related Properties		174
8.1	Introduction	174
8.2	Cobalt(II) bidentate Schiff-base complexes	175
	8.2.1 Experimental	176
	8.2.2 Results and discussion	179
8.3	Tetra dentate SB cobalt(II) complexes	187
	8.3.1 Experimental	188
	8.3.2 Results and discussion	191
8.4	Bidentate mercapto azolate complexes	199
	8.4.1 Experimental	199
	8.4.2. Results and discussion	201
8.5	Study of complex uptake on D and C	211
	8.5.1 Experimental	211
	8.5.2 Results and discussion	212
8.6	Polymer supported Co(III) SB complexes	214
	8.6.1 Experimental	215
	8.6.2. Results and discussion	215
	References	219
Chapter 9		
Summary of the Work		221
