

A C K N O W L E D G E M E N T

At the very outset I like most to express my indebtedness to Dr. Asok K. Mukherjee of Burdwan Raj College with sincere regards. He is an honest man, devoted research worker and spends every moment of his life to meet the needs of his students. I am fortunate to have his intimate contact as friend, colleague and supervisor. He introduced me into the field of graph-theory, offered encouragement and able guidance at every stage upto the completion of this work.

I am also indebted to Professor G.S.De, Head of the Department of Chemistry, Burdwan University and Professor S.C.Rakshit, former Head of the Department of Chemistry, Burdwan University for their assistance and constant encouragement in carrying out researches simultaneously with teaching.

I also express my sincere thanks to Mr.S.Banerjee of the Department of Physics, Burdwan Raj College, for bearing all the pains of preparing a neat typescript of this thesis on a computer.

Finally this acknowledgement will remain incomplete if I do not mention the silent service rendered by my wife, Jyotsna, who not only acted as a source of inspiration but shielded me for the last three years from all hazards of the family, and thus helped me in smoothly carrying out this research work.

Kal. Kinkar Datta.
