

CONTENTS

Introduction	1
Chapter-1. Definitions	
Graph	3
Sachs graphs	4
Weighted graph	5
Adjacency matrix	5
References	8
Chapter-2. Methods of construction of characteristic polynomial (CP):A review	
Introduction	9
Method using Sachs theorem	9
Origin of Sachs theorem	10
Sachs theorem for weighted graphs	11
Some recursion formulae	12
Enumeration principle of Hosoya	14
Illustration	16
μ -polynomial	18
CP via Ulam subgraphs	20
Matching polynomial via Fibonacci relations	21
CP via symmetry factorisation	26
CP via symmetric function theory	27
CP via Krylov's method	31
Le Verrier-Faddeev-Frame method	34
CP via polynomial matrix method	37
CP by pruning method	44
Iterative pruning method for weighted graphs	47
References	54
Chapter-3. Two methods for generation for eigenvectors of chemical graphs	
Introduction	58
Method (A)	58
Illustrations of method (A). Butadiene	60
Benzyl radical	61

Cases of degenerate eigenvalues	62
A graph-spectral property of annulenes	63
A graph-spectral property of complete graphs	63
Method (B)	64
Illustrations of method (B)	65
Concluding remarks	70
References	71
Chapter-4. Construction of cofactors and CP's by tracing of paths	
Introduction	72
Graph decomposition formula	72
Illustration. Example - 1	72
Example - 2	72
Proof	76
Conclusion	77
References	78
Chapter-5. Method of stepwise factorisation of symmetric graphs	
Introduction	79
Outline of the approach	80
The algorithm: case-1	81
Example - 1. Cyclobutadiene	82
Example - 2. A cubic lattice	84
Case - II	85
Example - 3. Cyclobutadiene	86
Example - 4. A tetrahedral graph	87
Example - 5. Naphthalene	88
Example - 6. Benzene	89
Case-III. Pyrrole like graph	90
Conclusion	91
References	91
Chapter-6. Transformation of undirected graphs into isospectral linear chains	
Introduction	92
Development of the algorithm: Part-A	92
Part-B	94
Part-C	96

Summary of the algorithm	97
Illustrations	98
Complete graph with four vertices	101
Cyclobutadiene	103
Six-membered cycle	104
Wheel graphs	105
Concluding remarks	107
References	108
Chapter-7. Application of graph-theoretical methods for analysis of charge-transfer spectra of molecular complexes	
Introduction	109
PMB-ICl complexes	110
t-butylfuran-TCNE complexes	116
t-butylthiophene-TCNE complexes	117
References	122
Chapter-8. Application of Budan-Fourier theorem for analysis of CP of some π -systems	
Introduction	123
Some graph-spectral features of	
Aniline-like systems	124
p-phenylenediamine-like systems	127
Conclusion	130
References	131
Summary	132
