

## CONTENTS

	Page
1. Summary ... ..	i-x
2. General Introduction ... ..	1-28
3. Chapter-I	
Kinetics and Mechanism of the Reaction of cis-Aquo-chloro and cis-Diaquo-tetrammine Cobalt(III) Ions with Ammonium Oxalate	29-90
Introduction ... ..	29
Experimental Section ... ..	32
Part-I	
Study of Hydrolysis of A, cis-aquo-chloro tetrammine cobalt(III) ion, (i) in absence and (ii) in presence of excess ammonium oxalate at pH 4.0 and at 35°C ... ..	36-37
Kinetic Studies and Results (value of rate const. $k_A$ ) ... ..	36
Part-II	
Study of the Reaction $B \rightarrow D$ and of the Reaction $A \rightarrow B \rightarrow D$ in aqueous solution using excess of ammonium oxalate (pseudo first order condition) at pH 4.0 and at 35°C [B = cis-Diaquo-tetrammine cobalt(III) ion, D = ring closed oxalato- tetrammine ion] ... ..	38-56
A. Prelude ... ..	38
B. Results and Discussion on Stoichiometric Mechanism $A \xrightarrow{k_A} B \xrightarrow{k_B} C \xrightarrow{k_C} D$ [C = aquo- hydrogen oxalato tetrammine cobalt(III) ion]	45-56
Part-III	
Detailed Mechanism of the Anation Reaction $B \rightarrow D$ : Study of the Reaction in aqueous solution using excess ammonium oxalate at 35°C but varying the pH from 4.0 to 3.0	57

	Page
A. Specific $\text{OH}^-$ catalysed $\text{SN}^1\text{CB}$ Reactions	57
B. Ion-pair Mechanism ... ..	61
C. The Study of pH variation on the Reaction Series $\text{B} \rightarrow \text{C} \rightarrow \text{D}$ at $35^\circ\text{C}$ ...	65
D. Proposed Mechanism of the Reaction $\text{B} \rightarrow \text{C}$ on the Basis of Specific $\text{OH}^-$ catalysed $\text{SN}^1\text{CB}$ scheme (Reaction Scheme-II) ...	67
E. Results and Discussion of Reaction Scheme-II	71
F. Mechanism of the Ring closure Reaction $\text{C} \rightarrow \text{D}$	78
References ... ..	89
4. Chapter-II	
Kinetics of the Reaction Between Diaquo-tetra- mmine $\text{Co(III)}$ ion (B) and Malonic Acid and its Detailed Mechanism ... ..	91-131
A. Introduction ... ..	91
B. Experimental Section ... ..	94
C. The Results of Kinetic Studies and Discu- ssion on the Stoichiometric Mechanism ...	98
D. The Study of pH variation on the Reaction Series $\text{B} \rightarrow \text{E} \rightarrow \text{F}$ (E = cis-aquo-hydrogen malonato tetrammine cobalt(III) complex F = ring closed malonato tetrammine cobalt(III) complex) ... ..	107
E. Tentative Mechanism of the Reaction $\text{B} \rightarrow \text{E}$ on the Basis of $\text{SN}^1\text{CB}$ Scheme (Reaction Scheme-I) ... ..	109
F. Actual Mechanism of the Reaction $\text{B} \rightarrow \text{E}$ (Reaction Scheme-II) ... ..	116
G. Mechanism of the Ring Closure Reaction $\text{E} \rightarrow \text{F}$ (Reaction Scheme-III) ...	118
