CHAPTER I

INTRODUCTION

1. Introductory	...	2
2. Objects and nature of the work	...	3
3. A brief resume of some related works on the bionomics of some defoliating Lepidoptera	...	5
(a) Life history of the caterpillars	...	5
(b) Effects of surroundings on the modes of life history	...	14

CHAPTER II

MATERIALS AND METHODS

I. Characters used for recognition of <u>Spodoptera</u> moths	...	21
A. The imago	...	21
B. The egg	...	25
C. The larva	...	25
D. The pupa	...	28
II. Description of <u>S. litura</u>	...	30
A. The collection, identification and distribution of the moth	...	30
i) <u>S. litura</u> (Fabricius) with common names	...	32
ii) Distribution	...	33

	Page
iii) Host-plants ...	35
iv) Host-plants and their leaf conditions ...	38
III. Laboratory mass rearing and life-history parameters ...	42
i) Rearing techniques ...	42
ii) Assesments of ingestion and egestion and growth ...	43
iii) Larval morphometrics ...	45
iv) Drying procedure and biomass determinations ...	47
v) Assesment of reproduction ...	48
IV. Adaptations to the physical environment (weather phenology) ...	49
a) Light trapping techniques ...	50
b) Meteorological recordings ...	53
i) Climatic conditions at Burdwan...	53
ii) Measurement of weather factors in two trap years ... (October 1990 - September 1992)	56
c) Logarithmic transformation and statistical processing of the data ...	56
d) Precautions against errors ...	60

CHAPTER III

RESULTS

A. Life-history ...	63
1. The egg ...	63

	Page
a) Effects of host leaves on oviposition, incubation and hatching	66
i) Mulberry	66
ii) Cabbage	66
iii) Castor	67
iv) Wild-hempweed	67
2. The caterpillar	72
a) First - sixth instar	72
b) Host leaves ingestion and egestion	85
3. The prepupa	87
4. The pupa	89
5. The adult	91
B. Synoptic weather in two trap years	93
i) Maximum and minimum temperature	93
ii) Maximum and minimum relative humidity	93
iii) Rainfall	96
C. Effects of synoptic weather on phenology of <u>S. litura</u> adults	98
i) Changes in relative abundance	98
ii) Changes in the pattern of moth's abundance in relation to weather factors	98

CHAPTER IV

Page

DISCUSSION

1. Life history and host plant phenology...	107
a) Mode of life of the immature stages	107
b) Host plant phenology ...	108
i) Larval instars and morphometrics	108
ii) Host leaf ingestion and egestion	111
iii) Larval and pupal biomass ...	113
iv) Adult emergence and sex-ratio ...	115
2. Light trap catches and weather phenology	117
a) Interpretation of the light trap catches	119
b) Interpretation of the effects of synoptic weather on light trap catches ...	119
i) Temperature ...	119
ii) Relative humidity ...	121
iii) Rainfall ...	122

CHAPTER V

<u>SUMMARY</u> ...	124
--------------------	-----

P A R T II

CHAPTER I

INTRODUCTION

1. Introductory	...	132
2. Nature of the work	...	134
3. Objectives of the work	...	137
4. A resume of some pertinent literature on insect bioenergetics	...	138

CHAPTER II

MATERIALS AND METHODS

A. Rearing and sampling methods adopted for bioenergetics studies	...	150
B. Gravimetry	...	150
i) Material-drying and pelletization	...	150
ii) Determination of ash contents	...	152
C. Calorimetry	...	152
i) The apparatus and its accessories	...	153
a) The microbomb	...	153
b) The water jacket	...	153
c) The offset stirrer	...	155
d) Calorimeter vessel	...	155
e) Bomb-firing unit-vibrator, timer and illuminator with magnifier	...	155
f) Pressure gauge on stand	...	156
g) Gas-release valve	...	156
h) The pellet press	...	156

	Page
i) The crucible ...	157
j) Ignition wire ...	157
k) Additional equipments ...	157
ii) Reagents, samples and sample holders ...	157
a) Benzoic acid ...	157
b) Standard alkali solution ...	157
c) Methyl red indicator ...	157
iii) Setting up and assembly ...	158
a) General arrangement ...	158
b) Assembly of calorimeter parts ...	158
c) Attaching the fuse ...	160
d) Water in the bomb ...	161
e) Filling the bomb with oxygen ...	161
f) Filling water in the bucket ...	162
iv) Functioning of the Calorimetric system and operational procedures ...	162
v) Calibration procedure ...	165
vi) Calculation of the energy values ...	166
a) The energy equivalents ...	166
b) Calculations of the energy value of the materials ...	168
c) Maintenance of larval instars ...	168
d) Correction factors ...	169
vii) The joule as an ecological unit ...	170

Page

viii) Calculations for energy utilization and energy transformation efficiencies	...	171
ix) Precautions against errors	...	172

CHAPTER III

RESULTS

A. Energy contents	...	176
1. Host leaves	...	176
2. Caterpillars	...	176
i) Energy ingestion rates	...	176
ii) Energy egestion rates	...	179
iii) The production of larval biomass	...	181
iv) Efficiencies of energy transfer	...	183
3. Prepupae and pupae	...	185
4. Adult female and male moths	...	185
5. Eggs	...	189

CHAPTER IV

DISCUSSION

i) Growth and energetic functioning	...	193
ii) Pathways of energy transfer	...	198

CHAPTER V

<u>SUMMARY</u>	...	206
<u>REFERENCES</u>	...	211
