PREFACE

Agriculture is a key in the rural sector, on which depends the pace progress of economy of India. India achieved self-sufficient in food production through means of Green Revolution. However, it has been disturbing due to population explosion on the one hand and low productivity level due to the measures not taken up, on the integral and integration of farm resources with collaboration, coordination and cooperation of various concerned in the progress of production. The effective use of land, water, manpower and credit on availability of air, light and climate conducive for growth is crux in reaping desired production. Added, the knowledge of farmers will also play a dominant role in achieving the same.

In this treatise an humble attempt has been made to study the available of farm resources and their use in support of the services extended by the Departments of Government with cultivable practices. In other words, how effectively the farmers used farm resources and availed of various services for optimum farm production. For examining this, the Farm Resources Development has undertaken with reference to the district of Cuddapah in Rayalaseema region of Andhra Pradesh.
The compiled and collected data including the need for study are presented in seven chapters, devoting the last chapter for conclusions and suggestions. A bunch of policy prescription is made for integral and integrated use of Farm Resources Development.
