Chapter 1 Copper(II) complexes with halides and pseudohalides: A brief introduction

1.1. Introduction ................................................................................................................................ 1

1.2. Stereochemistry.......................................................................................................................... 2

1.3. Outline of proligands used in the present study .......................................................................... 3

1.4. Classification of Cu(II) complexes based on nuclearity .............................................................. 6

1.5. Objectives of the present work .................................................................................................... 6

References .............................................................................................................................................. 7-8

Chapter 2 Copper(II) complexes containing thiocyanate as coligand

2.1. Introduction ................................................................................................................................ 9

2.2. Experimental .............................................................................................................................. 13-17

2.2.1. Synthesis of complexes ............................................................................................................ 13

2.2.2. Physical measurements ........................................................................................................... 14

2.2.3. X-ray crystallography ............................................................................................................. 14

2.3 Results and discussion ................................................................................................................ 18-48

2.3.1. Analytical measurements ........................................................................................................ 18

2.3.2. Crystal structure of complex 1 .................................................................................................. 18

2.3.3. Crystal structure of complex 2 .................................................................................................. 24

2.3.4. Crystal structure of complex 3 .................................................................................................. 27

2.3.5. Crystal structure of complex 4 .................................................................................................. 30

2.3.6. Crystal structure of complex 5 .................................................................................................. 32

2.3.7. Crystal structure of complex 6 .................................................................................................. 35

2.3.8. Infrared spectral studies .......................................................................................................... 38

2.3.9. Electronic spectral studies ....................................................................................................... 41

2.3.10. EPR spectral studies .............................................................................................................. 43

References ........................................................................................................................................ 48-51

Chapter 3 Copper(II) complexes containing azide as coligand

3.1. Introduction ................................................................................................................................ 53

3.2. Experimental .............................................................................................................................. 58-62

3.2.1. Syntheses of complexes ........................................................................................................... 58

3.2.2. Physical measurements .......................................................................................................... 59

3.2.3. X-Ray crystallography ......................................................................................................... 59

3.3. Results and discussion ................................................................................................................. 63-90

3.3.1. Analytical measurements ...................................................................................................... 63

3.3.2. Crystal structure of the complex 7 ......................................................................................... 63
3.3.3. Crystal structure of the complex 8 ................................................................. 69
3.3.4. Crystal structure of the complex 9 ................................................................. 74
3.3.5. Crystal structure of the complex 10 ............................................................... 78
3.3.6. Infrared spectral studies ................................................................................ 82
3.3.7. Electronic spectral studies ............................................................................ 85
3.3.8. EPR spectral studies ..................................................................................... 86
References ........................................................................................................... 90-97

Chapter 4 Copper(II) complexes containing cyanate as coligand

4.1. Introduction ..................................................................................................... 99
4.2. Experimental ................................................................................................ 101-103
  4.2.1. Syntheses of complexes ............................................................................ 101
  4.2.2. Physical measurements .......................................................................... 102
  4.2.3. X-Ray crystallography ............................................................................ 102
4.3 Results and discussion ................................................................................ 104-115
  4.3.1. Analytical measurements ........................................................................ 104
  4.3.2. Crystal structure of polymorphs 11 and 12 .............................................. 104
  4.3.3. Infrared spectral studies .......................................................................... 111
  4.3.4. Electronic spectral studies ...................................................................... 112
  4.3.5. EPR spectral studies .............................................................................. 114
References .......................................................................................................... 116-118

Chapter 5 Copper(II) complexes containing dicyanamide as coligand

5.1. Introduction .................................................................................................. 119
5.2. Experimental ............................................................................................... 121-123
  5.2.1. Syntheses of complex ............................................................................ 121
  5.2.2. Physical measurements .......................................................................... 121
  5.2.3. X-Ray crystallography ............................................................................ 121
5.3. Results and discussion .............................................................................. 124-132
  5.3.1. Analytical measurements ........................................................................ 124
  5.3.2. Crystal structure of the complex 13 ....................................................... 124
  5.3.3. Infrared spectral studies .......................................................................... 129
  5.3.4. Electronic spectral studies ...................................................................... 130
  5.3.5. EPR spectral studies .............................................................................. 131
References .......................................................................................................... 133-134

Chapter 6 Copper(II) complexes containing chloride as coligand

6.1. Introduction .................................................................................................. 135
6.2. Experimental ............................................................................................... 136-141
