List of Figures

1.1 Alternative neutrino mass patterns that are consistent with neutrino oscillation explanations of the atmospheric and solar neutrino deficits (taken from ref. [21]) .......................................................... 10

1.2 Feynman diagrams for neutrino scattering .............................................. 14

1.3 Neutrino energy levels in matter vs electron number density, $N_e$. Dashed line - in absence of mixing; solid line - with mixing. .............................. 18

1.4 Solar neutrino spectrum and thresholds of solar neutrino experiments 20

1.5 Double beta decay with and without neutrino emission, and qualitative shape of the expected added spectrum of the two electrons (taken from ref. [53]) ................................................................. 32

4.1 Variations of $S_{sol} = \sin^22\theta_{12}$ and $S_{at} = \sin^22\theta_{23}$ with energy scale $t = \ln(\mu)$, which are represented by solid-line and dotted-line, respectively. 78

5.1 Evolution of the three mixing angles with energy scale in JM conjecture[138]. $\sin \theta_{23}$, $\sin \theta_{13}$ and $\sin \theta_{12}$ are represented by solid line, dashed-line and dotted-line respectively. ............................................................. 100
5.2 Evolution of the three neutrino mass eigenvalues in JM conjecture [138]. $m_1$, $m_2$ and $m_3$ are represented by dashed-line, solid-line and dotted-line respectively. .................................................. 101

5.3 Evolution of the $\Delta m_{21}^2$ in JM conjecture [138] with energy scale. Its value at high energy scale is zero. .................................................. 103

5.4 Evolution of the three nearly degenerate neutrino masses in MPR conjecture [139] (without the effect of scale-dependent VEV in II). $m_3$, $m_2$ and $m_1$ are represented by solid line, dashed-line and dotted-line respectively. 104

5.5 Evolution of the three nearly degenerate neutrino masses in MPR conjecture [139] (with the effect of scale-dependent VEV in I). $m_3$, $m_2$ and $m_1$ are represented by solid line, dashed-line and dotted-line respectively. 106
