CONTENTS

ACKNOWLEDGEMENT IV

LIST OF ABBREVIATIONS V

CHAPTER - 1 INTRODUCTION 1

CHAPTER - 2 REVIEW OF LITERATURE 5

2.1 Carbohydrate metabolism and insect development 5
2.2 Carbohydrate metabolism in the silk gland and haemolymph 9
2.3 Carbohydrate metabolism under the influence of low temperature 13
2.4 Carbohydrate metabolism under the influence of insect hormone 15
2.5 Trehalase - purification and characteristics 20

CHAPTER - 3 MATERIALS AND METHODS 23

3.1 Silkworm rearing 23
3.2 Chemicals 24
3.3 Other materials used 25
3.4 Homogenization process 25
3.5 Biochemical assays of enzymes and metabolites 26
3.6 Sodium dodecyl sulphate-polyacrylamide gel electrophoresis (sds-page) 41
3.7 Biochemical analysis at various stage of the experimental insects 44
3.8 Biochemical analysis on the silk gland and haemolymph 44
3.9 Effect of hormones and other external factors on the silk worms 45
3.9.1 Impact of low temperature on Antheraea assama and Philosamia ricini 45
3.9.2 Exogenous application of hormone, hormone analogues on the silk worms 45
3.10 Partial purification of trehalase from muga silkworm 48
3.11 Statistical calculations 51
CHAPTER - 4

RESULTS

4.1 Fluctuation of activity in some enzymes and metabolites in the whole body of *Antheraea assama* and *Philosamia ricini* during developmental stages

4.2 Fluctuation of activity in some enzymes and metabolites in the silk gland and haemolymph of *Antheraea assama* and *Philosamia ricini* during fourth and fifth instars and spinning period

4.3 Fluctuation of activity in some enzymes and metabolites under the influence of low temperature, juvenile hormone, juvenile hormone analogue (methoprene), juvenile hormone-activating peptide (synthetic allatotropin) and juvenile hormone-like substance isolated from the haemolymph of *P. ricini*

4.3.1 Low temperature acclimative studies on *A. assama* and *P. ricini*

4.3.2 Impact of juvenile hormone, juvenile hormone analogue (Methoprene), juvenile hormone-activating peptide (Synthetic allatotropin) and juvenile hormone-like substance on *A. assama* and *P. ricini*

4.4 Partial purification and characterization of the enzyme trehalase from *A. assama* pupae

4.4.1 Partial purification of trehalase

4.4.2 Enzymatic properties

4.4.3 Estimation of molecular weight by Sodium Dodecyl Sulphate-Poly Acrylamide Gel Electrophoresis (SDS-PAGE)

CHAPTER - 5

DISCUSSION

5.1 Fluctuation of activity in some enzymes and metabolites in the whole body of *Antheraea assama* and *Philosamia ricini* during developmental stages

5.2 Fluctuation of activity in some enzymes and metabolites in the silk gland and haemolymph of *Antheraea assama* and *Philosamia ricini* during fourth and fifth instars and spinning periods
5.3. Fluctuation of activity in some enzymes and metabolites under the influence of low temperature, juvenile hormone, juvenile hormone analogue (methoprene), juvenile hormone-activating peptide (synthetic allatotropin) and juvenile hormone-like substance isolated from the haemolymph of *P. ricini*.

5.3.1. Low temperature acclimative studies on *Antheraea assama* and *Philosamia ricini*.

5.3.2. Impact of juvenile hormone, juvenile hormone analogue, juvenile hormone-activating peptide and juvenile hormone-like substance on *Antheraea assama* and *Philosamia ricini*.

5.4 Partial purification and characterization of the enzyme trehalase from *Antheraea assama* pupae.

CHAPTER - 6 SUMMARY AND CONCLUSION
