BIBLIOGRAPHY

Arch intern Med (1997),
Suggested a list of the Risk Factors.

Alexander (1939)
Noted the BP among hypertensive patients were markedly
elevated during stressful/disturbing session.

Adler, Harmann, Schafer, Schmidt, Schonexke and Rekulla (1976)
found the BP increased during the discussion of topics such as
personal failure or loss of status.

Alun and Smirk (1938), Ayman and Gold Shine (1938); Smith Wick
and Robertson (1951) and Thacker (1940)
The hypertensive to cold pressure have been confirmed.

Andre Peterson, Lena; Hagberg, 13; Hedblad, Janzon, Lars; Steen,
Gunnill (1999),
Study regarding incidence of cardiac events in hypertensive
related to adoptive behaviour in stressful encounter.

Abel, Gregory A; Chen, Xun; Boden-Albala, Bernadette; Sacco,
Ralph (1999)
Studies social readjustment and ischaemic stroke.

Amigo, Isaac; Gonzalez, Ana; Herrera, Julio (1997),
Hypertension and treatment group.

Absi, Mustafa; Buchanan, Tony W; Marrero, Abner; Lovallo William
R(1999),
Studied men and BP with genetic history.

Adler, Perry S.J. Ditto Blaine (1998),
Hypertension status of normotensive and parental hypertension
history

Auseo, Alex; 001 Wee L; Hossain, Monir; Lipsitz, Lewis A (1999)
Studied that pre breakfast loading of BP was consistently
the highest.
Agi, Mulafa; Lovallo, William R; Mc Key, Barbari; Sung, Bong Hee; Whit Sett, Thomas L; Willson, Michael F (1998),
Examines Pituitary-adreno cortical responses to dietary does of caffeine.

BH, Hegde (1988),
Hypertension the other side of the Coin.

Burch et al (1983),
Depression can develop in the hypertensive patients for a variety of regions, including reaction to the diagnosis to the hypertension.

Bourne and Associates (1968),
Who compared officers and enlisted men in Vietnam during a period of expected enemy attack.

Brandolo, Elizabeth; Rosen, Raymond C; Kostis, John B; Schwartz, Joseph E (1999),
In which studied BP, emotioned states, Hypertension, self perception symptoms.

Brown Carolyn M (200),
Study African-American in hypertension management.

Buchholz, Konrad; Schort, Ulrike; Turan, Selma; Sharma, Arve M; Osler, Hans Christian (1999),
Emotional irritation and anxiety in salt sensitive persons: risk to essential hypertension.

Bassion, Daniel E, Michla; Phillips (Et), Anderson, Arnold J (200),
Revealed that obesity is clearly associated with diabetes and hypertension, hyperlipidaemia, coronary artery disease, degenerative arthritis, gall bladder disease as well as cancer of the endometrium, breast, prostate and colon.

Baron, Dan, Lazer, Alon, Amir, Marianne (200),
For some certain issues in family life determine their quality of life and this has influence on hypertension.
Archintermod (1997),
Suggested a list of the Risk Factors.

Alexander (1939)
Noted the BP among hypertensive patients were markedly elevated during stressful/disturbing session.

Adler, Harmann, Schafer, Schmidt, Schonexke and Rekulla (1976)
found the BP increased during the discussion of topics such as personal failure or loss of status.

Alam and Smirk (1938), Ayman and Gold Shine (1938); Smith Wick and Robertson (1951) and Thacker (1940)
The hypertensive to cold pressure have been confirmed.

Study regarding incidence of cardiac events in hypertensive related to adoptive behaviour in stressful encounter.

Abel, Gregory A; Chen, Xun; Boden-Albala, Bernadette; Sacco, Ralph! (1999)
Studies social readjustment and ischaemic stroke.

Amigo, Isaac; Gonzalez, Ana; Herrera, Julio (1997),
Hypertension and treatment group.

Absi, Mustafa; Buchanan, Tony W; Marrero, Abner; Lavallo William R(1999),
Studied men and BP with genetic history.

Adler, Perry S.J. Ditto Blaine (1998),
Hypertension status of normotensive and parental hypertension history

Auseo, Alex; 001, Wee L; Hossain, Monir; Lipsitz, Lewis A (1999)
Studied that pre breakfast reading of BP was consistently the highest.
Examined alcohol consumption and the risk of hypertension.

Craig, Francis Washington (1999),
Studied fitness and family history of high BP.

Cririllo, Masima; Stellate, Davide; Lomberdi, Linzia; Desanto, Nalale G; Covelli, Vito (1999).
Age is direct related to prevalence of hypertension hypercholesterolaemia and obesity.

Cores, Robert A; Blu Menthal, James A; Sherwood, Andrew (1998),
Examined the relation between BP and 2 aspects of social support.

Ciccon, P; Thau, F; Bau Co, C; Bianch A; Fidente, D; Vetta, F; Ettose, E; Marigliano, V (1998),
Assessed anxiety levels and presence of symptoms of depression with newly diagnosed systolic hypertension.

Caputo, Jennifer L, Rudolph, David L; Morgan, Don W (1998),
Studies an inverse relationship between positive life events and diastolic BP.

Deam Fild et al (1978),
Silent myocardial ischaemia due to mental stress.

Dea Fild et al (1978),
Non epinephrine released with aggressive emotional state.
Silent myocardial ischaemia due to mental stress.

Davidson (1999),
Principle and practice of medicine in which classification of secondary hypertension is given.

Dalal PM (1976).
In essential hypertension.

Davidson, Karia; Macgregors; Michael Wm; Stuhr, Judith, Dixon, Kim; Maclean, David (2000),
Suggest that constructive anger expression may have on independent beneficial association with resting BP.

Dykman, Ros Coe A; Gantt, W Horsley (1997),
Examined BP conditioning to signals for a slightly painful stimulus.

Dobkin, Patricia L; Treiber, Frenk A; Tremblay, Richard E (2000),
Anxious and anxious disruptive boys exhibited greater systolic BP.

D' Antone, Bianca, Ditto, Blaine, Rios, Norka, Mosko, Witz, Debbies (1999)
Investigated the association between risk for hypertension and decreased pain sensitivity.

Davis, Catherin Lucy (1998),
The science and engineering.

Dillo, Blaine, Sejuin, Jein R; Boulerice, Barnard; Phil, Robert O; Trimblay, Richard E (1998),
Reduced pain perception in hypertensive patients.

Eyer (1975); Gutman and Bonson (1970),
Essential Hypertension where there are no known aetiology.

Enterline et al (1960),
Deaths from coronary disease were reported as being higher BP in urban than rural.

Eversson, Susan A; Goldberg, Debbie E; Kaplan, George A; Julkunen, Juhan; Salonen; Jukka T (1998),
Examined the relationship between anger expression style and incident hypertension.

Ehrenbarg, Brace (2000),
Sleep apnoea has also been correlated with hypertension and cardio vascular/cardio vascular disease.
Ghosh, SN; Sharma, Sagar (1998),
Studied that essential hypertensive subjects reported higher trait anxiety.

Hines (1940),
Also felt that people who have normal but highly reactive BP in response to the cold pressure test were most likely to develop hypertension later in life.

Hegde BM (1982),
Population studies in California have shown that people belonging to church groups have lower BP, than those who do not belong to any group.

Hegde BM (1987),
Unmarried people have higher pressure than people with happy families.

Hegde BM (1987),
Marginally elevated BP have underlying depressive traits, antihypertensives especially belonging to the 'Rawwolfia' alkaloids as B blockers group will worsen the depression and increase their problems.

Hegde BM (1983),
Left ventricular hypertrophy in hypertension.

Hegde BM (1984),
Fat profile in pindalol treated hypertensives and shown that hypercholesterolaemia claimed to have a very close relationship to vascular disease.

Hegde BM, Pai Ramdas, Kamath BR and Bhat EK (1987),
Hypertensive patients who have cardiac, renal and retinal changes have nothing in common and probably are different disease processes.

Harrison (2001),
Internal medicine in which classification of secondary hypertension is given.
Harieuly and Coworkers (1975),
Compared urban demographic distributions differing in population density and found BP.

Herwitz, Barry E; Schneiderman, Neil (1998),
Supporting the association between pathogenic processes leading to the development of IHD and Hypertension.

Hein Rich Heine, U. Duesseldorf (1998),
Examined associations between measures of work stress i.e. the combination of high effort and low reward and cardiovascular risk factors.

Han, Song Ping; Chen, Ziaoli; Cox, Bryan; Yang, Chunlian; W, Yuimei; Naes, Linda; Westfall, Thomas (1998),
Results suggest that chronic cold stress induced hypertension.

Hents Chel, Uwe; Nooijen, Edith (1999),
Found disturbed object relation specially with the father was found in the hypertensive group.

Harwood, DG Basker, W.W.; Loewenstein, D.A; Ownby, RL; St George Hyslop, P; Mullan, M; Dnara, Ranjan (1999),
Examined the risk of alcohol use and hypertension.

Herzen-Neijefek, Irena; Gotts Chak, Louisa; Januszele, Maciej (1999),
Emotional reactions to different kinds of illnesses including hypertension.

Heininger, Kart (2000).
Genetics and Health.

Hocking Schuler, Jennifer L; 'O' Brien William H (1997),
Examined stress and hypertensive risk factors.

Issacson, J. Harry; Nielsen, Craig, Urbamic, Richard; Challgren, Eric (1999)
Examine the co-relation among alcohol problems, certain health habits and hypertension.

Jenkins (1971)
Added some description in type 'A' and type 'B' personality list.
Jenkins (1971),
Added some description in type ‘A’ and type ‘B’ Personality list.

Jonas, Bruce S; Landon James F (2000),
Negative affect is a risk factor for hypertension.

Jeckson, Robert W; Treiber, frank A; Turner J. Rick; Davis Harry; Strong William B (1999),
Studied Cardio-vascular reactivity in relation to sex and race.

Jerez, Suranj; Coviello, Alfredo (1998),
Evaluated alcohol consumption a weak but significant relationship between quantity/frequency index and diastolic BP.

Jiang, Huaying; Xie, Guang rong, Yang, Yu (2000),
Depression and anxiety symptoms in senile patients with hypertension.

Jacob, Rolf G; Thayer, Julian F; Manuck, Stephen B; Muldoon Mathew F; Tamres, Lisak; Williams, David M; Ding Yijun; Galsonies, Constantine (1999),
Examined BP and its relation with mood.

K.D. Gupta (1989),
He tried to define the importance of mental stress in the genesis of myocardial ischaemia.

Kaplan, Gothchalk, Maeldoclox, Robovit and Ross (1961)
Noted that BP rise and hypertensive during discussing materials with hostiles content.

Kawachi, Ichira (1999),
Explores the relationship between weight gain and obesity which are clearly associated with hypertension.

Kumanyika, Shiriki K (1977),
Noted that BP is strongly related to Body weight.
Kleins Chmidt, Julia J; Digree, Kathleen B; Hanover, Rita (2000)
Persons are more affected with BP if they have anxiety, depression and bad quality of life.

Kubzansley, Laura D; Kawachi, P chiro; Weiss, Scot T; Sparrow David (1998),
Suggest that anxiety may be risk factor for the development of IHD and hypertension.

Krivchanko, TP; Verbovay, N.I. (1998)
Role of a depressor factor and the development of arterial hypertension.

Kohler, Th; Fricke, M; Ritz, TH; Scherbaum, N (1997)
Borderline hypertensives showed greater reactions to stressors in systolic BP only.

Lepeschkin E et all (1960),
Effects of epinerphirine and nor epinepherine on the ECG.

Landsbargis, Poul A; Cahill, Janet; Schnall, Peter (1999)
Studies have examined the line with hypertension and Cardio-vascular disease, with job characteristics, occupational safety occupational stress and working condition.

Lovallo, William R; Al’ Absi, Mustafa (1998),
Result high risk men had raised systolic/diastolic BP and higher vascular resistance with minimal difference in heart rate and cardiac out put.

Lawler, Kathleen A; Kline, Keith; Sea brook, Elizabeth; Krishnamoorthy, Jene Jenelle; Anderson, Sharon F; Wilcox, Zachary C; Craig, Francis, Adlin, Richard; Thomas, Sandra (1998),
Family history of hypertension and gender groups were compared on Cardio-vascular responses.

Laskin, Richard, Raps. Charles, Luskin, Frederic, Carlson, Rose Maric Crital, Robert (1999),
Hypnosis group showed greater down ward change in diastolic BP.
Mores, Daniels and Nickesson (1956),
Found that anxiety raised blood pressure and rage elevated it to even higher level.

Mutatic and Grant (1962);
Hypertension is a Common Cardio vascular disease in India.

Madhukar, Prakash, Ahuja and N. Lal (1979),
Have reported that hypertensive patients did not differ much from the control group, either on neuroticism or extraversion.

M. Seth (1981),
Has assessed the manifest needs of hypertensive and normal subjects on (EPPS).

Moods (1995),
Several studies reported dramatic increases in resting heart rate among executive given increased responsibility.

Mc Calla, Judith Ray (1998),
The studies myocordial and vascular response to challenge.

Miyazaki, Akio; Halayama, Toshiteru (1998),
Studied that Dahl salt sensitive rates show hypertension.

Mc Cabe, Philip M (Ed); Schneiderman, Neil (Ed); Field Tiffany (Ed) Wallens, A Rodney (Ed) (2000)
Stress and copy ing and bio-behavioural and solcial factors in cardio-vascular disease and BP elevation as a copying response.

Mac Garvey, Stephen T (1999),
Harmones, health and behaviour.

Malik, AK; Sabharwal Madhulika (1998),
Hypertension scores tend to be associated with emotional immaturity, introverted, absent minded and high ergic tension.

Mann, Samuel J, James, Gray D (1998),
and defensiveness.

_N. Lal Ahuja and Madukkar (1982),_
Observed that hypertensive reported more number distressing life events and given higher mean distress rating than normals.

_Nakao, Must-Suhiro, Nomuro, Shinabu, Shimosawa, Talsuo, Fugita, Toshiro; Kuboki, Tomifusa (2000),_
BP reduce significantly when they understand the bio-feed back treatment in group A and B.

_Niaura, Ramond; Banks, Saram; Ward, Kenneth D; Stony, Catherinem; Spiro, Avron iii, Carolyn M; Landsberg, Lewis; Scot, T (2000)_
Examined association between hostility and Cardio-vascular risk factors.

_Nyklicek, Ivan, Vingerhoets, Adj, Jm; Van Heek, Guusl (2000),_
Study the stress and coping and hypertension.

_Nakao, Mutsihiro, Nomura, Shinobu; Shimosawa, Talsuo; Fujita Toshiro, Kuboki, Tomifusa (1999),_
Clarified the clinical effects of bio-feed back on mild hypertension.

_Nyklicek, Ivan (1998),_
Reviewed literature concerning the relationship between BP and self reported stress.

_Ost Feld and Atri (1975),_
Compriison of prison inmetes found those housed in dormitory group to have BP than inmates housed alone.

_Olwatelure, Felif (1999)_
Result indicated that BP was positively associated with age.
Ontiveros, Jorge A; Black, Sandra A; Jakobi, Particia L; Good win James (1999)

Results show that African and Americans were more likely to attribute hypertension.

O’Brien, William H; Haynes, Stephen N; Mumbay, Patricia B (1998),
Study the Constitutional influence on vascular recovery.

Prof. Pikering (1968),
The man who clarified some blind spots in the field of hypertension.

Prof. Charles Sehar Schmidt (1747),
He had prescribed that best treatment which looks modern and physiological to-day.

Patric Rc (1983),
Relationship between BP, and modernity among Ponplans.

Prabhu V Rao and Hegde BM (1986),
Study of salt metabolism in normotensive medical student and proved beyond all doubt that the salt intake and type of food we take have no relationship to the aetiology of hypertension in patients.

Picot, Sandra J, Fulton; Zausz Niewski, Jaclene A; Defanne, Sara M Holston, Ezarac (1999),
Examined the relationship between mood symptoms and day time ambulatory.

Prit Chard, Duglas Alexander; Hyndmen, Jilala, Taba, Forough (1999),
Studied over weight and hypertension and type 2 diabetes.

Peter, Richard; Siegrist, Johannes (1999),
Studied hypertension and health adverse behaviours and psychosocial stress.

Peter, Richard, Alfredson; Lars; Knutsson, Anders; Siegrist, Johannes; Westerholm, Peter (1999),
Stressful psychosocial work environment acts as a mediator of health adverse effects of shift work on hypertension.
Peter, Richard; Siegrist, Johannes (1997),
Active coping with the experience of chronic work stress is more likely to be associated with physical health consequences of sustained, autonomic arousal such as hypertension.

Piccirillo, G; Bucca, C; Tarantini, S; Santhagada, E; Viola, E; Durante, M; Rajanito, P; Mariano, A; Cacciafesta, M; Marigliano (1998),
Studied autonomic nervous system activity by spectral analysis of heart rate and BP.

Pickering, Thomas (1999),
As per them people from lower socio-economic status, more disease including hypertension and cardiovascular disease.

Rev. Stephen Hallves (1773),
Was the first who measured arterial Pressure in his illustrious mare.

Riva Rocci (1856),
Who perfected the technique of measuring the BP with the help of Mercury manometer.

Richard B Devereul (1987),
Cardiac involvement in essential hypertension.

Shapiro et. al. (1982),
Studied the variables that influence BP and hypertension.

Sharma BK, Arora OP, Bansal BL, Sagar S, Khurana SK (1985),
Hypertension among industrial workers and professional classes in Ludhiana Punjab.

Seslow, Gressel, Shobe, Du Bois and Schroeder (1950),
Indicated need to control general factor in hypertensive research.

Sachachter (1957),
Studies showing that hypertensives respond to both fear (fear of electric shock) and anger with significantly greater increase in BP.
There is a positive relationship between alcohol intake and subarachnoids haemorrhage.

Alzheimer's disease patients accelerates the likely hood of hypeertension in caregivers.

Investigates the hypothesis that exposure to job strain is related to increase ambulatory BP.

Response of BP variability is from race to race and ethnic difference also.

Collected evidence that individuals with elevated resting BP display excessive Cardio-vascular reaction to laboratory stress.

Examined the relation between parental history of hypertension and urbanization.

Complex inter relationship between BP levels and cognitive decline.

emotional catacholamine nd the ECG progress in cardiology.
Thomas, John et al (1983),
reviewed the literature indicate that relevant precursor of hypertension are early elevated casual systolic BP, Positive family history and obesity in females.

Taggart and Corruthers (1971),
Analysis show a linear relationship between circulating catecholamines and free fatty acids.

Taggart and Associates (1973),
Assessed catecholamines and free fatty acids level before and after public speaking.

Trayer and Iader (1973),
Suggest that emotional leads to increase fatty acids level and this effect can be amended by blocking the activity of the sympathetic nervous system.

Thomas, Sandara P (1997),
Studied the relationship of anger suppression to BP.

Terado, Kayo; Kawakami, Norita; Inafa, Schizayo; Takatsuka, Noogoshi, Shimiza, Hiroyaki (2000).
It has been studied that tobacco smoking has role in hypertension.

Thewrell, Toeres, Alfredsson, Lars; Westerholm, Peter, Falek, Bengt (2000),
Hypertension is associated with coping style.

Vander Valk (1957),
Noted marked BP increases in response to topics of rejection by others hostility or ambivalence towards parents.

Vogel, Claus; Jarvis, Ann; Cheeseman, Karen (1997),
Investigated gender related differences in cardiovascular reactivity.
Wolf and Co!leagues (1964),
Examined the relationship between Personal's of copying with a stressful environment and measures of 17 OHCS, a secretion of the adrenal cortex.

Wolf, Pfuffer, Ripley, Winter and Wolf (1984),
By introducing conflictive topics were able to produce sharp increases in BP of Hypertensives.

Welsh, Anthony (1998),
A number of researchers have found that religious commitment has satutary effect on BP levels.

Whiteley, Jessica, Winett, Richard A (2000),
Physical activity and fitness associated with the prevention and control and coronary artery disease and hypertension.

Wu, Jln-Sheng, Ku, Yun-Hu; Li, Li Sheng; Lu, Yi-Chan; Ding Xin, Kiang, Yi-Guang (1999),
Analyses the possible neural basis of Hypertension.

Weidner, Gerdi, Messina, Catherine R (1998),
Stress and heart disease

Wals leven, Joyce A; Noreman, Robert G; Novak, Ronald D; O’ Malley Edward B; Rapoport, David M; Strohl, Kingman P (1999),
Reports of excessive day time sleepiness and history of hypertension, diabetes and obesity.

Zangari (1951),
Revealed that whenever hypertensives become anxious during an interview their systolic and diastolic BP rose.
